## 1.1 General Notes

### 1.1.1 Tables

Don't use class="wikitable" if you want this to export correctly in the PDF documentation - use the Table icon in the toolbar above (next to last button) and this will put in a table with more general formatting. e.g.

header1	header2	header3
cell1	cell2	cell3

*created from the Table toolbar button*

**header1 header2 header3**

cell1 cell2 cell3

*Table with wikitable*

 **Note:** I have tested a combined table format, and it looks good in both screen and PDF, as follows:

header1	header2	header3
cell1	cell2	cell3

*Merged format, good for both*

I have changed the button above so that it will always insert with the merged format - hard refresh your pages (CTRL-F5 or CTRL-Refresh to pick up the change.

So, in summary, always use the table button on the toolbar.
