1.1 Transport Unit section

You can set whether certain transport units are allowed or not allowed.

You can add whether transport units are allowed by clicking the  **New** button in the section. The screen will display a pop-up window to enter the following:

- *Transport Unit* - the transport unit. You can enter the transport unit or select it from a list using the  **Lookup** button to the right of the value entry. The screen will display a pop-up window showing all codes configured in the system. You can find codes by using the Filter box at the top of the pop-up and entering some characters of the code or name. You can enter a code by clicking the entry in the table or cancel by closing the window. You can configure transport units in the [Transport Units](#) screen.
- *Allowed* - a check box controlling whether the transport unit is allowed or not.

You can save your changes with the **Save** button, or discard your changes with the **Close** button.

You can delete an existing transport unit by selecting the transport unit row in the table and then clicking the  **Delete** button in the section header.
