1 Advanced Guide

This document comprises advanced information around several areas of the *CALIDUS* ePOD system, both within the Admin and mobile device applications.

Although the standard user guides present all the required information around how to use the particular applications and each screen within it, they do not cover user cases. Some of these user cases for the advanced system functionality are covered here.

For example:

- What kind of Import and Export Interfaces are available to be configured, with examples.
- Setting up User-Defined Forms and Fields (UDF) with specific use cases.
- Getting the most out of a TomTom WEBFLEET-connected system.
- Getting the most out of Job List sequencing on the device.
