Device Update Process

Contents

1 Device Update Process

1.1 ⊞ Windows Mobile

1.1.1 Server Updates

- Ensure you update the version number in the setting class
- Rebuild PDA App and Create a CAB File
- Copy CAB file to the Web Service directory PDAUpdates
- Update the webconfig file to reflect the PDA version

1.1.2 PDA Updates

- Log on to the device as the Admin User
- Confirm that it is OK to download the update
- Close the App after you are returned to the login menu
- Navigate to the My Documents directory and run the EPODClientInstaller.CAB file.

💡 **Note:** This should remove the previous version, if issues are encountered un-install the current version, and then open the .CAB file.

1.2 🤖 Android

If the new version is released through the Google Play market, the update should be available to download through that application within a few hours of being published.

See also the Device Installation section.
