3 Functiona Overview

3.1 Client Requirement

Change Background Colour of 'Customer ref' field to identify Modified orders

If an Order is Modified via Interface then the background colour of the 'Booking Ref, Customer Reference, Del Point Ref' fields should change to a Red Tone to identify Orders that have been modified. (As per the colour change associated with addition of Special Instructions) Suggest a third colour when both conditions are true.

Added by NW - 15/01/08: The condition should probably be based around the order being edited by the user associated with the Interface (MTS_INTERFACE) post creation. Once the order reference is highlighted in the new colour it should then revert the previous colour (either based on Special Instructions or none) once the order has been edited by a user other than MTS_INTERFACE, note that to apply this I would suggest it being mandatory to press the "Save" button.

I have suggested against the different colour when both criteria are satisfied as this will get confusing if a third criteria is added.

3.2 Solution

Currently the only highlighting functionality within ORDERS, TRIPSUM and TRIP_PLAN that applies to Consumer Networks is as follows: If an Order has Special Instructions then set the OMS Ref, External Ref, Del Point Ref and Booking Ref fields BLUE.

New functionality for screens ORDERS, TRIP_SUM and TRIPPLAN will set the External Ref, Del Point Ref and Booking Ref RED when the following are true:

Changed_User = ?MTS_INTERFACE? Created_Date and Changed_Date have a difference of more than 5 seconds, as when an Order is created by MTS_INTERFACE this process may span a few seconds. For example the Created_Date may be 27/06/2008 12:18:00 but when the Order is finished being automatically set up it will have a Changed_Date of 27/06/2008 12:18:02 with both Created_User and Changed_User being ?MTS_INTERFACE?, making it look like it was changed by MTS_INTERFACE post-creation. Also suggest checking: Order Status = ?UNSCHEDULED? as most orders in status of SCHEDULED, SCHED_COLL, DELIVERED etc. have a Changed_User of ?MTS_INTERFACE? due to POD Info / Order Revenue / Contract / Cost Data being changed/updated in the background.

When an Order has Special Instructions and has also been modified post-creation by MTS_INTERFACE this will be evident as the OMS Ref will be BLUE and the External Ref, Del Point Ref and Booking Ref will be RED, therefore no third colour will be required when both criteria are true. When the Order has been updated by someone other than MTS_INTERFACE, the RED highlighting will be removed and the OMS Ref, External Ref, Del Point Ref and Booking Ref will all be BLUE to indicate the order has only got Special Instructions.

3.3 Scope

This change will be applied to system version 10.6 on CONTST and once approved CONPRD. This form will be applicable to all MTS environments, as the nature of this change does not impact on the current functionality of the form. At present, only Consumer Networks have Orders Modified by MTS_INTERFACE and will therefore be the only environment to see the red highlighting.

4 Functional Description

4.1 New Functionality

The screenshot below is an example of the Order Summary section of the ORDERS screen including the new functionality to highlight the External Ref, Del Point Ref and Booking Ref with the colour RED; when the Order has been modified by MTS_INTERFACE post-creation.

ORDERS v2.1
MTS v19.0

On the screen above, you can only see the External Ref, if an Order has been modified Post-Creation by MTS_INTERFACE and also has Special Instructions; then RED highlighting will take precedence on the Order Summary screen.

Below is an example screenshot of the Order Details section of the ORDERS screen including the new functionality for RED highlighting. An Order that has been modified post-creation by MTS_INTERFACE will display as this; without having Special Instructions.

Product Type	DU Type	Qty	Weight	Volume	Cases	RPE	Despatched	Delivered	Weight	Volume	Special Flag
AMBIENT	CHEP PALLET	1.000	493.32	1.00000	120	1.00					

This further screenshot is an example of the Order Details Section with an order that has been modified post-creation by MTS_INTERFACE; with Special Instructions.

4.2 New Function

The following Function F_CHECK_ORDER_MODIFIED will be used in forms TRIP_PLAN, TRIPSUM and ORDERS. It will be passed in an OMS_REF where it will check to see if

- the last_changed user was MTS_INTERFACE
- the order status is UNSCHEDULED
- the difference between created_date and changed_date is more than 5 seconds

If TRUE is returned then RED highlighting will be used in the specified fields.
