3 Functional Overview

3.1 Client Requirement

Add a Break Line between trips

3.2 Solution

Increase the size of the repeating frame R_G_TRIP_ID which encloses the trip information. Within the extra space, at the bottom of the frame create a line which will print at the end of each trip record. The line will run the full length of the repeating frame which incorporates TRIP_ID to EARLY_DEL. Ensure the frame is page protected so that we do not start a new page with the line.
