3 FUNCTIONAL OVERVIEW

3.1 Client Requirement

Order template creation should allow an order to be created each day within a date range.

The requirement is to support creating a series of orders in one activity, for example building a schedule of daily intake orders for an operational week.

3.2 Solution

OBS will modify the existing template generation process so that a date range may be selected by the user prior to generation and then used to generate multiple orders.

3.3 Scope

This change will be applied to system version 10.5

4 FUNCTIONAL DESCRIPTION

4.1 Changes to Order Template Batches

The screenshot shows the 'Order Template Batches' application window. The interface includes a list of active batches on the left, a central table of templates with their sequences and quantities, and a right-hand panel for configuring delivery details like origin, destination, and day offsets. A table at the bottom summarizes the product types and quantities for the selected templates.

It is currently possible to set up 7 templates with day offsets set to 1,2,3,4,5,6,7 which will generate orders for 7 days in the future.

The changes needed to only generate 1 template and create a defined number of orders from this template are as follows:

- A new tick box will be required, this will replace the redundant ?Send to MTM? box. The new tick box will indicate whether a template batch can be generated for Multiple Days. When the tick box is checked the Day Offsets will be greyed out.
- When the user clicks the Generate Button for a Template Batch which has the tick box checked the current pop up screen will be extended to request a number of days to generate.
- If the user enters a number greater than 1 a new process will be executed which will loop through the dates for the number of days in the future and generate the required orders.
