Aaptean

DHL C-TMS

Modifications to Order Entry

FUNCTIONAL SPECIFICATION - 10.7

16/11/2011 - 1.1

Reference: FS 291211 NW-8KND7U

2 Functional Overview

2.1 Client Requirement

Modify the manual order entry capability within C-TMS to allow a user to create a new location when entering an order.

The user should firstly enter the post code of the location which will display all existing matches (active or inactive displayed by selection flag) and allow the user to select one of these if it matches, otherwise the user will be able to create a new location without exiting the order.

This should also be incorporated into the existing functionality to automatically create a new location via interfacing.

The ability to capture Hazardous information either manually or via an inbound interface should also be added, this should include the following:

1. It is envisaged that a flag will be added to the Order in C-TMS which denotes that the Order includes hazardous products, if this flag is either ticked or set to ?Y? the key reference fields on the Order should be displayed in red.
2. An additional tab should also be added to the Order that will contain the UN number and associated quantities. In this instance the details will be populated manually but there is an additional requirement to be able to load the data from the .csv file or via the interface from Unison or another WMS.

2.2 Solution

The ?Order Details? screen will be changed to allow a user to create a new location during the entry of a transport order.

Two new buttons called ?Postcode Search? will be displayed in the ?Detail? tab page for the ?Collect From? and ?Deliver To? fields to allow the user to view and select a location from a lookup screen for the following fields:

- Location Name (mandatory)
- Contact Name (non-mandatory)
- Ward / Department ? (non-mandatory)
- Street / Address Line 1 (mandatory)
- Area / Locality / Address Lines 2 and 3 (non-mandatory)
- Town (mandatory)
- County / State (non-mandatory)
- Postal Code / Zip Code (mandatory, validated on format for the country)
- Country Code (mandatory)

The user will then be able to select the existing location for the collection or delivery location, or generate a new location ID by specifying a unique location ID.

N.B. The existing functionality to create a new location via the EDI inbound order process when the collection or delivery location received is unknown will be retained.

A new tick box called ?Hazardous? will be displayed in the ?Detail? tab page to denote whether the transport order includes any hazardous products, if so then the relevant records will be highlighted as hazardous.

A new tab page called ?Hazardous Data? will be created to display and maintain the ?UN Number?, quantity and other references for the hazardous products.

The hazardous data will be uploaded via the CSV order import and the EDI inbound order process.

The ?Order Details? screen will be changed to store the recipient address details (i.e. phone number or e-mail address) and the method of transfer (i.e. SMS or e-mail) as received from WMS.

Reference additional changes for addition of manual pack confirmation button NW-8KEMRU

Label Reprinting will also be covered within the scope of this RIO.

2.3 Scope

This change will be applied to system version 10.7.

3 Set-up

3.1 Pre-requisites

None

3.2 Menu Structure

No change

3.3 Data

- - ◆ A new ?HAZARDOUS_ITEMS? column will be added to the ?SCH_ORD? table.
 - ◆ A new sequence called ?SEQ_HAZARDOUS_ITEMS? will be developed.
 - ◆ A new table called ?HAZARDOUS_ITEMS? will be developed.
 - ◆ A new system parameter called ?ORD_POSTCODE_SEARCH? will be setup and will be set to ?Y?.

4 Functional DESCRIPTION

4.1 Order Entry

4.1.1 Postcode Search

The ?Order Detail? screen will be amended to allow a user to create a new location during the entry of a transport order.

To achieve this two new buttons titled ?Postcode Search? will be added to the order details tab of the order entry form. The new buttons will be located to the right of the ?Collect From? and ?Deliver To? fields and a suggested layout of the screen is shown below:

The screenshot shows the SAP Order Detail screen. At the top, there are tabs for Detail, Order Items, Add Refs, Add Detail, LOC Detail, SAP Detail, MTM Info, and Audit. Below the tabs, there are several input fields and checkboxes. To the right of the 'Collect From' and 'Deliver To' fields, there are two new buttons labeled 'Postcode Search'. Above these buttons, there are checkboxes for 'Late Order', 'Manual Order', 'Urgent Order', and 'Show Inactive locations'. Below the 'Postcode Search' buttons, there is a 'Temp Combo' field and a 'Quality Control' checkbox.

When either of these buttons is selected a new screen will be displayed to allow the user to enter the postcode value they wish to search for. Once a postcode has been entered the user will press a ?Find Address? button which will display all existing addresses with the specified postcode.

The ?Postcode Search? buttons will only be displayed if the new ?ORD_POSTCODE_SEARCH? system parameter is set to ?Y?.

A suggested layout for the ?Postcode Search? screen is displayed below:

The screenshot shows a 'Postcode' search interface. At the top, there is a 'Postcode' input field and a 'Find Addresses' button. Below this is a table with the following columns: Location Id, Depot, Location Name, Address Line1, Address Line2, Address Line3, Town, County, Postcode, and Country. The table contains 10 rows of address data. At the bottom of the screen are 'Select Address' and 'Create Address' buttons.

The items that will be displayed will be:

- Location ID
- Depot
- Location Name
- Address Line 1
- Address Line 2
- Address Line 3
- Town
- County

- Postcode
- Country
- Postal Region
- Planning Region

A horizontal scrollbar will be available to display all of the items in the screen.

The user can scroll through the list of addresses and a vertical scrollbar will be provided to the right of the data.

There will then be two options to select from:

- Select an address from the displayed list
- Create a new address

If the ?Select Address? option is pressed, the address record that the cursor is currently in will be used to populate either the ?Collect From? or ?Deliver To? address, this information will be determined by identifying which of the ?Postcode Search? buttons was selected from the orders screen. If an existing location address is not displayed in the current record then an error message will be issued because an address cannot be selected. Once a valid address has been selected, the ?Postcode Search? screen will be exited and the user returned to the ?Order Detail? screen.

If the ?Create Address? button is pressed, the user will be taken to the ?Locations? form as shown below.

The ?New Location? button will then be defaulted automatically and the ?Insert New Location? screen (shown in ?Location Screen 2? below) will be displayed. The user can then enter a new address as normal and all required existing validation will be performed.

The ?Locations? form will be amended to allow the new address details to be returned to the calling form as parameters. When the ?Close? button is pressed the calling form will be checked to determine if it has been called from the ?Order Detail? screen and, if so, it will pass back to the ?Orders? form the details of the ?Location ID? generated for the new address created; it may then be used as the ?Collect From? or ?Deliver To? location as previously described.

Location Screen 1:

Location Screen 2:

4.1.2 Hazardous Items

A new tick box titled ?Hazardous? will be added to the ?Order Detail? screen above the existing ?Quality Control? tick box.

The ?Hazardous? tick box will be unchecked upon entry and when it is checked it will indicate that the order contains hazardous items. The suggested layout is shown below:

A new table ?HAZARDOUS_ITEMS? will be created as detailed below:

COLUMN	DATA TYPE	SIZE	MANDATORY
ID	NUMBER	10	Yes
OMS_REF	CHARACTER	12	Yes
UN_NUMBER	CHARCATER	50	Yes
DESCRIPTION	CHARACTER	40	Yes
QUANTITY	NUMBER	28,4	Yes

A sequence called ?SEQ_HAZARDOUS_ITEMS? will be created to be used as the primary key to the table (i.e. ?ID?).

A new tab page ?Hazardous Data? will be added to the ?Orders? form, this tab page will be based upon the new ?HAZARDOUS_ITEMS? table. The new tab page will be used to capture the details of hazardous items for the order being captured. If the hazardous items field is set to ?Y? these details must be populated.

The ?SEQ_HAZARDOUS_ITEMS? next value should be used as the primary key of the table for all inserts. A suggested

layout is shown below:

UN Number	Description	Quantity
UN_NUMBER	DESCRIPTION	QUANTITY

Save Delete

The screen will contain a vertical scrollbar to the right of the data to allow the user to display all the hazardous data related to the order. There will be two buttons on the screen:

- ?Save? will save any changes made
- ?Delete? will delete the current record

4.1.3 Message Medium

The ?Order Detail? screen will be amended to show the recipient address details related to the order in the ?LOC Detail? tab page.

The ?Message Medium? will be either ?SMS?, ?EMAIL?, ?BOTH? or ?NONE?. The value entered here will be used to determine if the user must enter at least one SMS address, an e-mail address or both, these values will not be validated. The information entered will be used to update the relevant fields on the order.

A suggested layout is shown below:

Detail	Order Items	Add Refs	Add Detail	LOC Detail	SAP Detail	MTM Info	Audit
Message Medium	MSG_MEDIUM	SMS Address	SMS_ADDRESS	Deliver To	Email Address	EMAIL_ADDRESS	
Collection From							
Location Id	LOCATION_ID			Location Id	LOCATION_ID		
Location Name	LOCATION_NAME			Location Name	LOCATION_NAME		
Address Line1	ADDRESS_LINE1			Address Line1	ADDRESS_LINE1		
Address Line2	ADDRESS_LINE2			Address Line2	ADDRESS_LINE2		
Address Line3	ADDRESS_LINE3			Address Line3	ADDRESS_LINE3		
Town	TOWN			Town	TOWN		
County	COUNTY			County	COUNTY		

The ?Message Medium? will be a single character to denote the method of transfer to be used:

Value Description

S	SMS
E	EMAIL

B Both SMS and EMAIL
N None

?SMS Addresses? each will store up to 12 characters, whereas ?Email Address? will store up to 100 characters.

N.B. Up to 4 SMS addresses may be stored per transport order and these addresses will be visible in the ?Message Medium? tab page for maintenance and they will be uploaded in the sub-references section in the ?TripOrder? file.

4.1.4 Mandated Carrier

A mandated carrier may be required for the transport order and a new ?Carrier? field will be added to the ?Detail? tab page below the new ?Service Type? field.

The **?Carrier?** will be validated that it exists as a **?Carrier ID?** in the **?Carriers?** tab page in the **?Resource Maintenance?** screen and a list of values will be available for selection:

Detail	Order Items	Add Refs	Add Detail	LOC Detail	SAP Detail	MTM Info	Audit					
Cost Centre	<input type="text" value="COST_CENTR"/>	Customer	<input type="text" value="CUSTOMER"/>	Schedule	<input type="text" value="SCHED_NAME"/>	<input checked="" type="checkbox"/> Late Order	Service Type	<input type="text" value="SERVICE_TYPE"/>

Special Instructions	SPECIAL_INSTRUCTIONS											

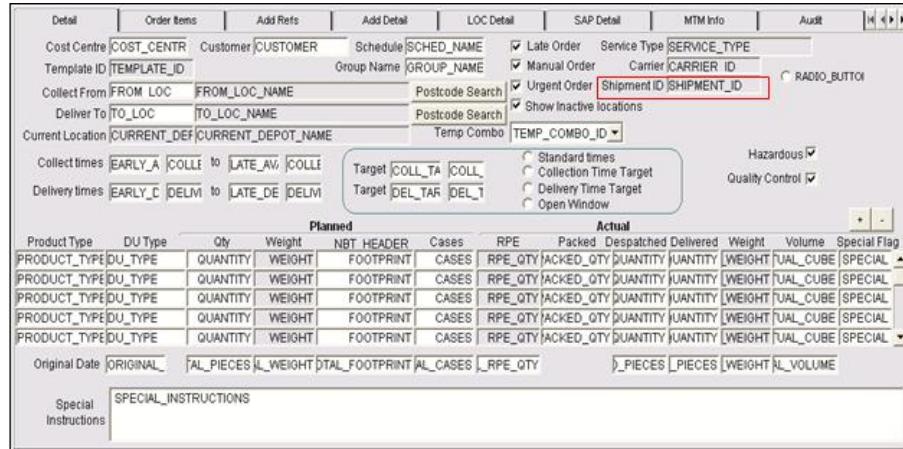

The mandated carrier can then be used in the consolidation and scheduling processes as per the orders imported via XML and CSV files.

The mandated carrier will be stored in the new ?SCH ORD INFORMATION CARRIER ID? database item.

4.1.5 Shipment ID

The shipment ID will be displayed in the **Detail** tab page below the new **Carrier** field:

The screenshot shows the SAP Order Detail screen. The 'Shipment ID' field, located in the 'SAP Detail' tab, is highlighted with a red box. Other fields visible include 'Cost Centre', 'Customer', 'Schedule', 'Service Type', 'Delivery To', 'Current Location', 'Collect From', 'Delivery times', and various time-related fields like 'Early_A' and 'Late_Av'.

The ?Shipment ID? field will not be editable.

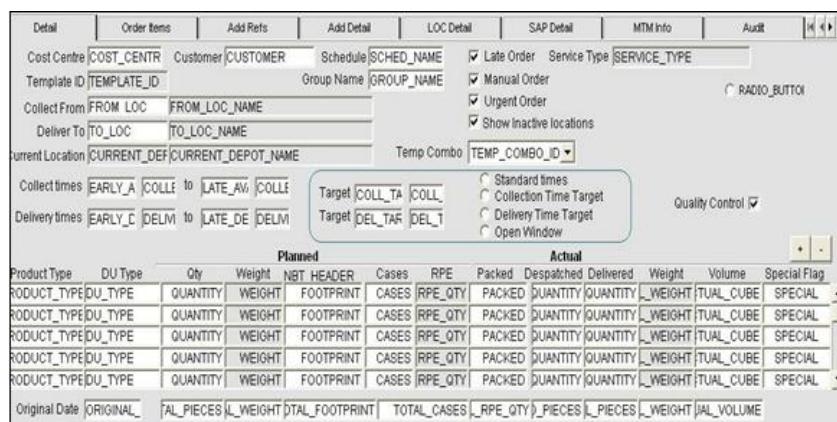

The shipment ID will be stored in the new ?SCH_ORD.SHIPMENT_ID? database item.

The database trigger will ensure that each transport order generates a shipment ID

The database trigger, sequence and the new items may be created using the scripts in Appendix A.

4.1.6 Packed Quantity

The ?Order Detail? screen will also be changed to display the ?Packed? quantity before the ?Actual Despatched? quantity of an order line in the ?Detail? tab page:

The screenshot shows the SAP Order Detail screen with the 'Packed' quantity field highlighted in red. The 'Packed' field is located in the 'Actual' section of the table under the 'RPE' column. The table also includes columns for 'Planned', 'Cases', 'Weight', 'NBT HEADER', and 'Special Flag'. Other fields visible include 'Cost Centre', 'Customer', 'Schedule', 'Service Type', 'Delivery To', 'Current Location', 'Collect From', 'Delivery times', and various time-related fields like 'Early_A' and 'Late_Av'.

4.1.7 Pack Confirm

A new button called ?Pack Confirm? will be added to the bottom of the ?Order Summary? and ?Order Detail? screens.

It is expected that the ?Pack Confirm? button will only be used for manually entered orders because they will be effectively consolidated shipments.

N.B. A ?CIPD? message will not be received for these orders.

The ?Pack Confirm? button will be used to run the scheduling engine for the OMS reference.

Once the scheduling engine has been run successfully then the labels will be printed automatically to the user's default printer.

In summary:

1. Enter an order with, or without, a mandated carrier in the new field in the ?Order Details? tab page.
1. Press the new ?Pack Confirm? button in the same tab page:
 1. If the order is not on a trip (i.e. it is not already scheduled) then it will be scheduled by running the scheduling engine for that OMS reference.
 2. The scheduling engine will only be run for the single order if it is not already running via the database job.
 3. A mandated carrier will be used if it exists for the order as per the standard scheduling functionality.

Once the scheduling has been performed successfully (if required) then the labels will be printed to the default printer for the user for the trip and carrier assigned to the order.

A suggested layout is shown below:

?Order Summary?:

SCHED_ID	BOOKING_REF	STATUS	DELIVER	COLL_ID	COLLECT	EARLY_AVAIL	DEL_ID	DELIVER	LATE_DEL	TARGET
SCHED_ID	BOOKING_REF	STATUS	DELIVER	COLL_ID	COLLECT	EARLY_AVAIL	DEL_ID	DELIVER	LATE_DEL	TARGET
SCHED_ID	BOOKING_REF	STATUS	DELIVER	COLL_ID	COLLECT	EARLY_AVAIL	DEL_ID	DELIVER	LATE_DEL	TARGET
SCHED_ID	BOOKING_REF	STATUS	DELIVER	COLL_ID	COLLECT	EARLY_AVAIL	DEL_ID	DELIVER	LATE_DEL	TARGET
SCHED_ID	BOOKING_REF	STATUS	DELIVER	COLL_ID	COLLECT	EARLY_AVAIL	DEL_ID	DELIVER	LATE_DEL	TARGET
SCHED_ID	BOOKING_REF	STATUS	DELIVER	COLL_ID	COLLECT	EARLY_AVAIL	DEL_ID	DELIVER	LATE_DEL	TARGET
SCHED_ID	BOOKING_REF	STATUS	DELIVER	COLL_ID	COLLECT	EARLY_AVAIL	DEL_ID	DELIVER	LATE_DEL	TARGET

PO Details | Order Count | Cancel/Restore | Search | New | Edit | View | View Trip | View POD | Re-book | Reprint Label | Pack Confirm | Close

?Order Detail?:

Original Date	ORIGINAL_	AL_PIECES	L_WEIGHT	AL_FOOTPRINT	TOTAL_CASES	RPE_QTY	Pieces	L_PIECES	L_WEIGHT	AL_VOLUME
Special Instructions	SPECIAL_INSTRUCTIONS									
New Order	View Info	Save	Close	Re-book	Send Ord Msg	Non Conformance	Late Reason	Pack Confirm	Reprint Label	

The ?Pack Confirm? button will only be active for ?UNSCHEDULED? orders. When this button is pressed the order should be scheduled onto a shipment and then a trip and a label produced. The functionality to achieve this is detailed within a separate RIO ?290934-NW-8KEMRU?.

4.1.8 Reprint Label

A new button called ?Reprint Label? will be added to the bottom of the ?Order Summary? and ?Order Detail? screens.

The ?Reprint Label? button will enable the user to request reprinting for whatever reason and this button will not perform any scheduling.

A popup box will be displayed with the default printer for the user but the user will have the ability to specify another printer name provided that it exists as a default printer for any user.

N.B. The ?Pack Confirm? and ?Reprint Label? buttons will need to check that the carrier of the order (or the trip if not mandated) has a label format setup and, if not, advise the user that the processing is not required for that

carrier.

4.1.9 Repacking

If repacking is required (e.g. the carrier has advised that the scheduled collection will not be performed) then the user will have to follow the procedure to unschedule the order, modify it and reschedule it.

Afterwards, the labels can be produced via either the ?Pack Confirm? or ?Reprint Label? buttons as appropriate.

4.2 Order Import

The order import flows from either a ?CSV? format or an ?XML? format (i.e. ?TripOrder?) will now contain the details of hazardous items related to an order. The order imports will be changed to create the hazardous data records in the new ?HAZARDOUS_ITEMS? table. If there are hazardous items present in the import file the hazardous items field for the order will be set to ?Y?, if no hazardous items are not present the field will be set to ?N?.

These import changes will be described in more detail in RIOs ?291449 NW-8L3JXV? and ?291614 NW-8L8JRN?.
