## 1 Carrier Groups

Carrier Groups are used to define reporting priorities.

To create a new group, click on **New** to open the form. Enter the "Name" and "Report Seq" which controls the priority and then click **Save** to return to the main form. You can click on **Cancel** to cancel your entry.

You can also enter an EPOD Site - this is the general grouping of carriers within your Calidus EPOD system, if you have it and if it is configured for carrier-level sites.

The **Edit** button can be used to edit the groups and therefore change the reporting sequence. Generally two "Carrier Groups" require mandatory set up: a "Fleet" and "Haulier". Old Groups can be deleted using the **Delete** button provided that there are no associated records.
