# 1 Extracts

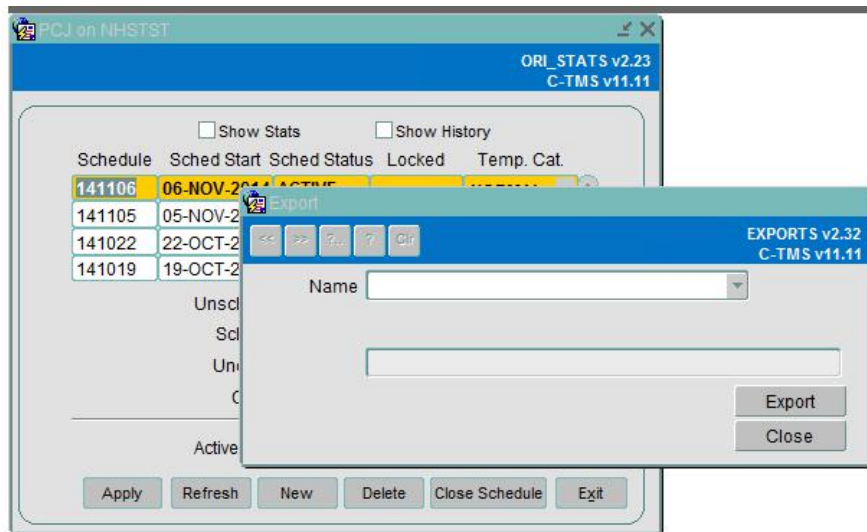

C-TMS Exports provides the users with Extracts of data that are required for day to day operations, finance and management reporting.

Requirements for particular exports are defined by the business and once exports have been developed and installed onto C-TMS, they are available to users via the Exports form.

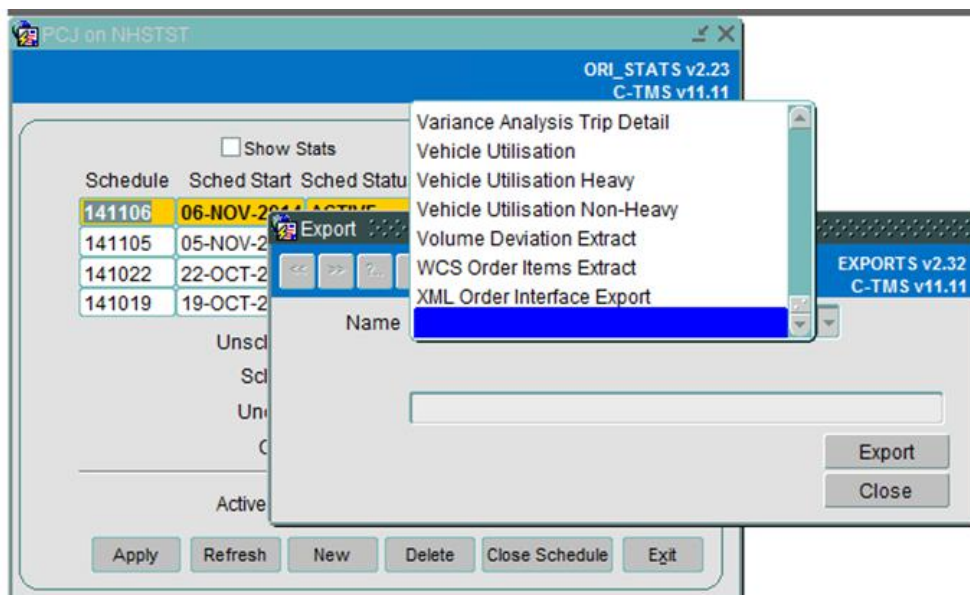

C-TMS Exports can be accessed from the C-TMS Modules menu

## 1.1 Generating Exports

Once you click on the Exports option, the form as shown below will be displayed.

Select the required extract from the drop down field. Based on the Extract that you are selecting a list of parameters for generating the Extract will be displayed as shown below.

**Note:** User access to particular exports is controlled by the Administration section of C-TMS and is maintained by administrator users of the system. See the ADM section for further information.

In this example, we will look at generating the Failed Shipment. Once the Failed Shipment option is selected, the list of parameters for generating the Extract will be prompted as shown below. Based on the Extract that you are selecting the parameters will vary.

**Note:** Some parameters are mandatory, others are optional. Some exports do not require any input from the user.

Enter the From, To Schedule and Customer details and click on the **Export** button to generate the extract. You can save the file to your PC, the method will differ depending on which browser you are using.

Once you have saved the file you can open it in an application on your PC to view or edit.

## 1.2 Available Extracts

The following is a list of common available extracts. There are other bespoke extracts that may also be used. At latest count there are over 240 extracts.

| Export                      | Description   |
