1 System Configuration

This form allows the configuration of menus, external systems, default printers, and reports.

Menu Name	Menu Label	Type	Form Name	Parent Menu
ACCESS_CTRL	Access Control	F	ACC_CTRL	ADMINISTRATION
AUDIT_LOG	Audit Log	F		ADMINISTRATION
FILE_INTERFACES	File Interfaces	M		ADMINISTRATION
FIXED_SCHEDULES	Fixed Schedules	F	GENERATE	ADMINISTRATION
INTERFACES	Interfaces	M		ADMINISTRATION
LOCK_MONITOR	Lock Monitor	F	LOCK_MONITOR	ADMINISTRATION
MSG_MONIT	Message Monitorir	F	MSG_MONIT	ADMINISTRATION
MSG_MONIT_ARCHIVE	Archived Message	F	MSG_MONIT_ARC	ADMINISTRATION

1.1 Menu Items

Configuration of menu items is controlled using the screen below. The System Configuration -> Menus tab allows administrators to control how the C-TMS menu is constructed, the labels that are displayed and the forms that are called.

1.2 Systems

In order to define source systems within C-TMS the tab below is used. A source system is an application or method by which orders are created and fed into C-TMS. For example LANES, these are orders entered via the Lane Based Order Entry form.

1.3 Printers

Printers used centrally and on remote sites are defined here. Printer queues are set up when C-TMS is accessed using the Oracle Application Server. The queue name is the report queue that is defined when the Oracle Reports server is set up.

1.4 Reports

Report configuration allows administrators to include and set up reports that are to be used in C-TMS. The report name is the name that will appear in the reports drop down list on the reports form. The settings Filename, Printer Type and Orientation are self explanatory, the Default Queue is the queue that the report will be sent to when using Oracle Reports Server.
