EMERGENCY RELEASE - CTMS 11.0

RELNOTE ER022-086

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks	Reporter
TRM.sql	Trip Management Package	5.150	339881	-	3	Added new functions for .net ctms system.	Dave Meir

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks	Reporter
DATA_ADM_SYSTEM_PARAM_340206.sql	Data Script	1.1	340206	-	3	A new process will be available to automatically update trips to a status of 'COMPLETED'. This process will be activated by a new system parameter called 'TRM_COMPLETED_SETTINGS' being set to 'Y' for the cost centre of the trip. The process will not include the existing validation but it will include new validation that can be configured by customer or by cost centre based on the order. There are 8 new tick boxes that can be configured in the 'Customers' maintenance screen for the customer and/or the cost centre. These tick boxes will be used to activate the required level of validation that will be required to automatically complete the trips that have a current status of 'PLANNED', 'TENDERED',' ACCEPTED' or 'EN-ROUTE' as they are updated.	Dave Meir

Ready for **What's Next, Now**™

A new EDI process can be setup to automatically complete the trips and a range of schedules can be specified to select the trips.

There are 8 new validation checks that can be performed and the flags for the customer will take precedence over the flags for the cost centre when the orders on the trips are assessed.

Note that if the same flag for the customer is not set but it is for the cost centre then that piece of validation will be active.

POC Signature: The order must have a signatory at the loading location and a date for its capture.

POC Quantities: The order lines must have an actual despatched quantity.

Load Reasons: The order items must have a corresponding reason code for the loading activity at the collection location.

POD Signature: The order must have a signatory at the unloading location and a date for its capture.

POD Quantities: The order lines must have an actual delivered quantity.

Unloading Reasons: The order items must have a corresponding reason code for the loading activity at the delivery location.

Stops: All of the trip stops must have actual arrival and departure times.

Stop Activity: All of the trip stops with orders assigned to them must have actual arrival and departure times.

Technical Details: A new EDI process called 'AUTO_COMPLETE_TRIPS' can be setup as follows:

Direction: Outbound Cost Centre: As appropriate Location: As appropriate Flow Type: PROCESS

Delivery Folder: /webint/{DATABASE}/export Archive Folder: /webint/{DATABASE}/export Failures Folder: /webint/{DATABASE}/export
