1 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

1.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

1.2 Related Documents

None

2 User Notes

This is a release of the Apteian POD - Calidus Edition device application.

2.1 Released Incidents / Changes

This release contains the following fixes/changes:

Cancel All Outstanding - 01591944

Added the ability, controlled by server side job group setup, to Complete a job by cancelling all of the remaining/outstanding items (containers & products) using a reason code maintained against the job group (on the admin system)

2.2 Setup

Details of any system setup required by either Apteian or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

2.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

2.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

2.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

2.6 Technical Changes & Special Notes

2.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

2.6.2 Special Notes

This change has made changes to the device's database. As such the device database will be automatically cleared and re-created (when the app is opened). This will lose any outstanding data on the device (e.g. partially completed jobs or any data that has not been sent back to the server. As such, before installing this version, it is essential (to avoid any loss of data) to make sure all jobs on the device are either complete or have not been started and that all pending messages

have been sent to the server. To ensure all pending messages have been sent the user can use the ?Send Pending Messages? menu option from the login screen which will either send any pending messages with a progress bar or inform the user there are no pending messages waiting to be sent.
