# 1 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

## 1.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

## 1.2 Related Documents

None

## 2 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

### 2.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 378/280

Resolved some Vehicle Search UI Issues:

- Display customer and location name when searching;
- Clear location name when location is clicked on;
- Customer cannot be edited;
- Always default customer in search, whether this is being displayed or not;
- Set maximum length of customer and location to maximum for CTMS.
- Status of vehicle search results now sets the border colour.

### 2.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices
CTMS	Configuration	For those customers using EPOD linked to CTMS, the display of customer is linked to the system parameter configuration EPOD_OWNER_CONFIG being set against the cost centre to value "C".

### 2.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Add Vehicles/Vehicle Search	<p>The vehicle search screen now displays the customer and location description. Note that this is dependent on the OWNER ID and NAME being set against the jobs.</p> <p>The customer cannot be changed.</p> <p>Whether the customer is displayed in this screen or not, it will be applied as criteria to the search, as it is required.</p> <p>When you click on the Location parameter, the location name is cleared.</p> <p>When results are displayed, the default for the screen is to now display the border of the row indicating the status (if the item has actions or not, the border will be red. This replaces the prior default configuration where the status was displayed by default within the row. This can be configured to be re-added to the results along with the border if required.</p>

### 2.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

## 2.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

This is a stand-alone release and fix to the Android application and completely resolves issue 280 (to display the customer and location name). However, regarding Issue 377 (whereby the location and customer were wrong on the search and the service report), further releases and configuration are required within Calidus TMS and the Calidus EPOD server (for the work report). ? CTMS requires configuration to set the Owner ID and name correctly. ? CTMS requires a change to revert a prior change whereby the location was set to the customer code incorrectly. ? EPOD requires a release to correct the display of the Invoice To, Supplied To and Location addresses on the Central Tyre service report. Until all of these releases are complete, Issue 377 remains open.

## 2.6 Technical Changes & Special Notes

### 2.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

### 2.6.2 Special Notes

None
