2 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

2.1 Released Incidents / Changes

This release contains the following fixes/changes:

650525 - Missing charge for order 5622

- To avoid issues with services supplied field not showing certain options (those limited to a certain tyre size) for service product records which do not yet have a product code/tyre set, a change has been made to use the service product lookup to force the user to specify the service product code before calling the UDF screen. This means that when the service product UDF is called we will always have a service product code/tyre set and so the services supplied field will include the appropriate tyre size dependent options (based on the tyre size of the selected/specified tyre).

662985 - no job update for job 7191 & 7290

- Fixed an issue which could prevent the device from sending an update for jobs that had been completed on the device (which prevented these jobs from showing as completed in other systems)

2.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
None		

2.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

2.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

2.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

2.6 Technical Changes & Special Notes

2.6.1 Technical Changes

None

2.6.2 Special Notes
