1 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

1.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

1.2 Related Documents

None

2 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

2.1 Released Incidents / Changes

This release contains the following fixes/changes:

669624 Last page blank so cant input torque settings and job info

- Added a potential fix (since the issue cannot be replicated cannot be 100% certain that the coded fix will resolve the issue) for an issue that was preventing the device from showing the Diagnosis UDF (torque settings) and added some extra audit logging.

678898 jobs failed to complete from epod and produce invoice

- Added extra device side validation to prevent users from creating new vehicles with a reg ID with a length greater than 12 characters (to avoid issues processing the job update on the admin server due to field length constraints).

2.2 Setup

Details of any system setup required by either Aptean or Client.

| By | Reference | Description |
|------|-----------|-------------|
| None | | |

2.3 User Instructions

User details and instructions of the new or changed process

| Topic | Action | Description |
|-------|--------|-------------|
| None | | |

2.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

2.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

2.6 Technical Changes & Special Notes

2.6.1 Technical Changes

None

2.6.2 Special Notes

None
