

Aptean

v4.05.01.32 User Release Notes

Aptean POD - Calidus Edition - Device Application

23/06/2025

Contents

1 Introduction.....	1
1.1 Platforms/Databases.....	1
1.2 Related Documents.....	1
2 User Notes.....	2
2.1 Released Incidents / Changes.....	2
2.2 Setup.....	2
2.3 User Instructions.....	2
2.4 Performance Notes.....	2
2.5 Related Releases.....	2
2.6 Technical Changes & Special Notes.....	2
3 Introduction.....	3
3.1 Platforms/Databases.....	3
3.2 Related Documents.....	3
4 User Notes.....	4
4.1 Released Incidents / Changes.....	4
4.2 Setup.....	4
4.3 User Instructions.....	4
4.4 Performance Notes.....	4
4.5 Related Releases.....	4
4.6 Technical Changes & Special Notes.....	4
5 Introduction.....	5
5.1 Platforms/Databases.....	5
5.2 Related Documents.....	5
6 User Notes.....	6
6.1 Released Incidents / Changes.....	6
6.2 Setup.....	6
6.3 User Instructions.....	6
6.4 Performance Notes.....	6
6.5 Related Releases.....	6
6.6 Technical Changes & Special Notes.....	6
7 Introduction.....	7
7.1 Platforms/Databases.....	7
7.2 Related Documents.....	7
8 User Notes.....	8
8.1 Released Incidents / Changes.....	8
8.2 Setup.....	8
8.3 User Instructions.....	8
8.4 Performance Notes.....	8
8.5 Related Releases.....	8
8.6 Technical Changes & Special Notes.....	8
9 Introduction.....	9
9.1 Platforms/Databases.....	9
9.2 Related Documents.....	9
10 User Notes.....	10
10.1 Released Incidents / Changes.....	10
10.2 Setup.....	10
10.3 User Instructions.....	10
10.4 Performance Notes.....	10
10.5 Related Releases.....	10
10.6 Technical Changes & Special Notes.....	10

Contents

11 Introduction.....	12
11.1 Platforms/Databases.....	12
11.2 Related Documents.....	12
12 User Notes.....	13
12.1 Released Incidents / Changes.....	13
12.2 Setup.....	13
12.3 User Instructions.....	13
12.4 Performance Notes.....	13
12.5 Related Releases.....	13
12.6 Technical Changes & Special Notes.....	13
13 Introduction.....	14
13.1 Platforms/Databases.....	14
13.2 Related Documents.....	14
14 User Notes.....	15
14.1 Released Incidents / Changes.....	15
14.2 Setup.....	15
14.3 User Instructions.....	15
14.4 Performance Notes.....	15
14.5 Related Releases.....	15
14.6 Technical Changes & Special Notes.....	15
15 Introduction.....	16
15.1 Platforms/Databases.....	16
15.2 Related Documents.....	16
16 User Notes.....	17
16.1 Released Incidents / Changes.....	17
16.2 Setup.....	17
16.3 User Instructions.....	17
16.4 Performance Notes.....	17
16.5 Related Releases.....	17
16.6 Technical Changes & Special Notes.....	17
17 Introduction.....	18
17.1 Platforms/Databases.....	18
17.2 Related Documents.....	18
18 User Notes.....	19
18.1 Released Incidents / Changes.....	19
18.2 Setup.....	19
18.3 User Instructions.....	19
18.4 Performance Notes.....	19
18.5 Related Releases.....	19
18.6 Technical Changes & Special Notes.....	19
19 Introduction.....	20
19.1 Platforms/Databases.....	20
19.2 Related Documents.....	20
20 User Notes.....	21
20.1 Released Incidents / Changes.....	21
20.2 Setup.....	21
20.3 User Instructions.....	21
20.4 Performance Notes.....	21
20.5 Related Releases.....	21
20.6 Technical Changes & Special Notes.....	21

Contents

21 Introduction.....	23
21.1 Platforms/Databases.....	23
21.2 Related Documents.....	23
22 User Notes.....	24
22.1 Released Incidents / Changes.....	24
22.2 Setup.....	24
22.3 User Instructions.....	24
22.4 Performance Notes.....	24
22.5 Related Releases.....	24
22.6 Technical Changes & Special Notes.....	24
23 Introduction.....	26
23.1 Platforms/Databases.....	26
23.2 Related Documents.....	26
24 User Notes.....	27
24.1 Released Incidents / Changes.....	27
24.2 Setup.....	27
24.3 User Instructions.....	27
24.4 Performance Notes.....	27
24.5 Related Releases.....	27
24.6 Technical Changes & Special Notes.....	27
25 Introduction.....	28
25.1 Platforms/Databases.....	28
25.2 Related Documents.....	28
26 User Notes.....	29
26.1 Released Incidents / Changes.....	29
26.2 Setup.....	29
26.3 User Instructions.....	29
26.4 Performance Notes.....	29
26.5 Related Releases.....	29
26.6 Technical Changes & Special Notes.....	29
27 Introduction.....	31
27.1 Platforms/Databases.....	31
27.2 Related Documents.....	31
28 User Notes.....	32
28.1 Released Incidents / Changes.....	32
28.2 Setup.....	32
28.3 User Instructions.....	32
28.4 Performance Notes.....	32
28.5 Related Releases.....	32
28.6 Technical Changes & Special Notes.....	33
29 Introduction.....	34
29.1 Platforms/Databases.....	34
29.2 Related Documents.....	34
30 User Notes.....	35
30.1 Released Incidents / Changes.....	35
30.2 Setup.....	35
30.3 User Instructions.....	35
30.4 Performance Notes.....	35
30.5 Related Releases.....	35
30.6 Technical Changes & Special Notes.....	35

Contents

31 Introduction.....	37
31.1 Platforms/Databases.....	37
31.2 Related Documents.....	37
32 User Notes.....	38
32.1 Released Incidents / Changes.....	38
32.2 Setup.....	38
32.3 User Instructions.....	38
32.4 Performance Notes.....	38
32.5 Related Releases.....	38
32.6 Technical Changes & Special Notes.....	38
33 Introduction.....	40
33.1 Platforms/Databases.....	40
33.2 Related Documents.....	40
34 User Notes.....	41
34.1 Released Incidents / Changes.....	41
34.2 Setup.....	41
34.3 User Instructions.....	41
34.4 Performance Notes.....	41
34.5 Related Releases.....	41

1 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

1.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

1.2 Related Documents

None

2 User Notes

This is a release of the Apteian POD - Calidus Edition device application.

2.1 Released Incidents / Changes

This release contains the following fixes/changes:

357568 - Android Pie Upgrade Testing Issues.

- Fixed an issue where the pre-job UDF screen was not being closed when a job was completed (if not using pre-job signatures)
- Fixed an issue where the signature screen did not allow use of enough space for the signature capture when the screen is opened in landscape orientation.

2.2 Setup

Details of any system setup required by either Apteian or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

2.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

2.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

2.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

2.6 Technical Changes & Special Notes

2.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

2.6.2 Special Notes

None

3 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

3.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

3.2 Related Documents

None

4 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

4.1 Released Incidents / Changes

This release contains the following fixes/changes:

357568 - Android Pie Upgrade Testing Issues.

Fixed an issue where some layouts of the cancellation/change quantity screen would cause parts of the photobar to appear off the bottom of the screen making it inaccessible. This section will now scroll allowing any portion not initially visible to be accessed.

4.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

4.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

4.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

4.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

4.6 Technical Changes & Special Notes

4.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

4.6.2 Special Notes

None

5 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

5.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

5.2 Related Documents

None

6 User Notes

This is a release of the Apteian POD - Calidus Edition device application.

6.1 Released Incidents / Changes

This release contains the following fixes/changes:

359275 - Warehouse Loading and Unloading.

Made changes to allow a load to be marked as ready or not ready. Added functionality to prevent a load marked as not ready from being started until it has been marked as ready

6.2 Setup

Details of any system setup required by either Apteian or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

6.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

6.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

6.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

6.6 Technical Changes & Special Notes

6.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

6.6.2 Special Notes

None

7 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

7.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

7.2 Related Documents

None

8 User Notes

This is a release of the Apteon POD - Calidus Edition device application.

8.1 Released Incidents / Changes

This release contains the following fixes/changes:

358385 - Container count on job list showing incorrect value.

Fixed an issue where the container count on the job list could show a higher value than it should when using consolidated jobs and consolidated containers.

8.2 Setup

Details of any system setup required by either Apteon or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

8.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

8.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

8.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

8.6 Technical Changes & Special Notes

8.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

8.6.2 Special Notes

None

9 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

9.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

9.2 Related Documents

None

10 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

10.1 Released Incidents / Changes

This release contains the following fixes/changes:

355570 - Fix issue accessing manual configuration settings when changing site.

Fixed an issue which could prevent access to the manual configuration when the site ID has been changed if the retrieval of standing data for the new site fails.

365646 - Fix container list refresh after deconsolidating a job from the container list.

Fixed an issue where a container was not removed from the container list after deconsolidating a job from the container list pop-up options until the user exited and re-entered the screen.

10.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

10.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

10.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

10.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

10.6 Technical Changes & Special Notes

10.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

10.6.2 Special Notes

None

11 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

11.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

11.2 Related Documents

None

12 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

12.1 Released Incidents / Changes

This release contains the following fixes/changes:

368271 - Fix issue when changing a product qty to zero.

Fixed an issue which would cause the app to stop responding when changing a product quantity if the quantity was changed to zero.

12.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

12.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

12.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

12.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

12.6 Technical Changes & Special Notes

12.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

12.6.2 Special Notes

None

13 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

13.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

13.2 Related Documents

None

14 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

14.1 Released Incidents / Changes

This release contains the following fixes/changes:

368718 - Make sure user action in progress is reset if logout option is used in vehicle checks.

Fixed an issue where backing out of required vehicle checks (i.e. logging out) would leave the login button disabled, preventing the user from logging in again.

368838 - Remove auto-update progress indicator from job list action bar

Removed the ability to show when the auto-update background processing was running in the job list action bar as the newer version prevent this from updating the action bar and the progress indicator could cause the application to crash.

14.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

14.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

14.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

14.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

14.6 Technical Changes & Special Notes

14.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

14.6.2 Special Notes

None

15 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

15.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

15.2 Related Documents

None

16 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

16.1 Released Incidents / Changes

This release contains the following fixes/changes:

369089 - Automatically focus on container/product entry text fields.

Fixed the focus for the container entry and product entry text fields so that the focus is on these fields when shown, so they are ready to accept input from built in scanners.

16.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

16.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

16.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

16.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

16.6 Technical Changes & Special Notes

16.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

16.6.2 Special Notes

None

17 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

17.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

17.2 Related Documents

None

18 User Notes

This is a release of the Apteian POD - Calidus Edition device application.

18.1 Released Incidents / Changes

This release contains the following fixes/changes:

376409 - Fixed issue with job not moving to signature when using consolidated containers.

Fixed an issue which was preventing the device from automatically moving on to job completion tasks (e.g. signature capture, job photos etc.) when the last container was completed if the jobs included consolidated containers, i.e. where the same container ID is used on two or more consolidated jobs and using a style which is set to use consolidated containers.

18.2 Setup

Details of any system setup required by either Apteian or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

18.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

18.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

18.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

18.6 Technical Changes & Special Notes

18.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

18.6.2 Special Notes

None

19 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

19.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

19.2 Related Documents

None

20 User Notes

This is a release of the Apteian POD - Calidus Edition device application.

20.1 Released Incidents / Changes

This release contains the following fixes/changes:

Cancel All Outstanding - 01591944

Added the ability, controlled by server side job group setup, to Complete a job by cancelling all of the remaining/outstanding items (containers & products) using a reason code maintained against the job group (on the admin system)

20.2 Setup

Details of any system setup required by either Apteian or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

20.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

20.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

20.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

20.6 Technical Changes & Special Notes

20.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

20.6.2 Special Notes

This change has made changes to the device's database. As such the device database will be automatically cleared and re-created (when the app is opened). This will lose any outstanding data on the device (e.g. partially completed jobs or any data that has not been sent back to the server. As such, before installing this version, it is essential (to avoid any loss of data) to make sure all jobs on the device are either complete or have not been started and that all pending messages

have been sent to the server. To ensure all pending messages have been sent the user can use the ?Send Pending Messages? menu option from the login screen which will either send any pending messages with a progress bar or inform the user there are no pending messages waiting to be sent.

21 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

21.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

21.2 Related Documents

None

22 User Notes

This is a release of the Apteian POD - Calidus Edition device application.

22.1 Released Incidents / Changes

This release contains the following fixes/changes:

218185: NHS v4.5 Testing Issue 1

Added the ability to lock the application orientation to either portrait or landscape via a new application setting. This can be set either manually on the device (may need remote access user credentials to authorise) or via a barcode.

218186: NHS v4.5 Testing Issue 2

Fixed an issue that was preventing the ad-hoc container ID field from being cleared after processing an ad-hoc container meaning that the next manual entry/scan via built in scanner would be appended to the previous entry (which could make cause it to be rejected as an invalid format).

22.2 Setup

Details of any system setup required by either Apteian or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

22.3 User Instructions

User details and instructions of the new or changed process

23.2 Related Documents

None

24 User Notes

This is a release of the Apteian POD - Calidus Edition device application.

24.1 Released Incidents / Changes

This release contains the following fixes/changes:

Bug 222550: SRV BUG - APK Compatibility Issue - 01742515 - DEV-85239

Fixed an issue which cause the deliver All and collect all functionality to be disabled if using anything earlier than the latest admin system (version 4.5.1.7).

24.2 Setup

Details of any system setup required by either Apteian or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

24.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

24.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

24.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

24.6 Technical Changes & Special Notes

24.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

24.6.2 Special Notes

None

25 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

25.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

25.2 Related Documents

None

26 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

26.1 Released Incidents / Changes

This release contains the following fixes/changes:

Bug 225081: EPOD updating delivery product issues

There was an issue which meant when a collection product had a zero planned quantity and then had an actual quantity set on the device the product quantity on any linked delivery product was not being updated. This update was working when changing the quantity on collection products which had a non-zero planned quantity.

This issue has now been addressed and setting a quantity on a collection product for which the planned quantity was zero will now update the linked delivery product (if there is one) in the same way as changing the quantity on a collection product which had a non-zero planned quantity would update the linked delivery product

26.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

26.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

26.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

26.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

26.6 Technical Changes & Special Notes

26.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

26.6.2 Special Notes

None

27 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

27.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

27.2 Related Documents

None

28 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

28.1 Released Incidents / Changes

This release contains the following fixes/changes:

232821 - CUSTOM - Crosswater Scanning Method Changes

The application now captures scanning method when scanning products and returns the data to the server for analysis and reporting. This captures whether the product was selected from the screen (ACCEPT), scanned using the on-board camera scanner (SCAN), keyed in and confirmed on the device (KEY) or automatically confirmed by Collect/Deliver all functions or when all products within a container are successfully completed (AUTO).

Note: devices with an onboard scanner are defined by the application as KEY methods in this release.

28.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

Note: A server application release is required to successfully store the captured entry methods. However, this version of the mobile application does not require this to be released - the application is backward-compatible and may be released before the server modifications. The server Product Scanning Report will not work without this version of the mobile application being rolled out to devices.

28.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	None	The application is used in exactly the same way as before with no changes to the user interface - the capture of entry method is seamless in the background of the device.
Installation	Initial Login	As the application's internal database is updated by this release, the application will re-initialise on first start-up after installing this version. This requires the user to log in initially before selecting the vehicle. The application will walk the user through the process. Note: It is recommended that any jobs in progress on the device are complete before this version is installed on the mobile device. No data will be lost, but jobs in progress may require items re-scanning if this is installed mid-way through processing a job. In progress loads will not be affected.

28.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

28.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

28.6 Technical Changes & Special Notes

28.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

28.6.2 Special Notes

None

29 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

29.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

29.2 Related Documents

None

30 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

30.1 Released Incidents / Changes

This release contains the following fixes/changes:

01804003 - Devices Freezing

The bug is related to cancelling or changing a quantity on a product where that job is a collection linked to a delivery.

This has now been fixed so that the product on the delivery job is found and updated correctly, with the quantity updated, the product cancelled (if cancelled or zero-quantity) at collection, and the job marked as amended.

The app has also been modified to prevent this kind of fatal error occurring again when changing quantity against products.

30.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

30.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	None	The application is used in exactly the same way as before with no changes to the user interface.

30.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

30.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

30.6 Technical Changes & Special Notes

30.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

30.6.2 Special Notes

None

31 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

31.1 Platforms/Databases

31.2 Related Documents

None

32 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

32.1 Released Incidents / Changes

This release contains the following fixes/changes:

Bug 254389 - app not automatically selecting product input field

The product entry field, where a product code can be typed in or scanned, is not always being focused on. This means the user has to manually select this field before scanning a product code, causing delays.

A fix has been applied so that the product entry field is now automatically focused on. Note the issue was occurring when processing a job which only used loose products.

32.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

32.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	None	The application is used in exactly the same way as before with no changes to the user interface.

32.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

32.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

32.6 Technical Changes & Special Notes

32.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

32.6.2 Special Notes

None

33 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

33.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

33.2 Related Documents

None

34 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

34.1 Released Incidents / Changes

This release contains the following fixes/changes:

Bug 277526 - ePOD app ignoring rotation settings in some screens

The App was ignoring the application orientation setting when set to Portrait or Landscape. It has been noticed that this is only the case in some screens. For example, this seems to be working in the job list screen but not in the job details screen.

A fix for this has been coded in this build/release. Note the issue only affected screens (such as the job detail screen) which had tabs (such as the ?Address & Contact? and ?Instructions? tabs on the job details screen)

34.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

34.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	None	The application is used in exactly the same way as before with no changes to the user interface.

34.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

34.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

34.6 Technical Changes & Special Notes

34.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

34.6.2 Special Notes

None

35 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

35.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

35.2 Related Documents

None

36 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

36.1 Released Incidents / Changes

This release contains the following fixes/changes:

User Story 314311: CUSTOM - SCR-440290-09 EPOD Update server jobs when backed out - 01944165 - DEV-110891

- Added the ability to send job updates for incomplete jobs when exiting the collection/delivery screen, controlled by server side setup.

36.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

36.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	None	The application is used in exactly the same way as before with no changes to the user interface.

36.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

36.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

36.6 Technical Changes & Special Notes

36.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

36.6.2 Special Notes

None

37 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

37.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

37.2 Related Documents

None

38 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

38.1 Released Incidents / Changes

This release contains the following fixes/changes:

User Story 311572: SCR-440290-07 Bundle Scan Process - 01944165 - DEV-109968

- Added Bundle scanning functionality which allows a bundle to be scanned instead of a product which is then, via the Mapex web service, translated into a product code and a bundle weight which is then used to calculate the bundle quantity for use with product countdown functionality.

38.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

38.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	None	The application is used in exactly the same way as before with no changes to the user interface.

38.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

38.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

38.6 Technical Changes & Special Notes

38.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

38.6.2 Special Notes

None

39 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

39.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

39.2 Related Documents

None

40 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

40.1 Released Incidents / Changes

This release contains the following fixes/changes:

BRC - SCR-357982-11 - Overpick - Confirm

- When scanning at BRC, and the amount picked exceeds the amount required, request confirmation from the user.

BRC - SCR-357982-12 -Display products in job sequence, with job sequence

- Sort the products on a consolidated job by job sequence. Display the job sequence.

BRC Issue 5 - Duplicating products on consolidated containers from second job onwards.

BRC Issue 6 - Consolidation being lost on auto-update of incomplete jobs back from EPOD device.

BRC Issue 11 - NOTRACE on bundle ID. Allowed duplicate scanning

BRC Issue 24 - When using product qty countdown, original qty should be the original qty, not the entered quantity.

40.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

40.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Note	On a fleet inspection, the Services screen will always show all tabs, but will not allow the user to switch tabs until at least one item (vehicle) has been added to the service.

40.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

40.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

40.6 Technical Changes & Special Notes

40.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

40.6.2 Special Notes

None

41 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

41.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

41.2 Related Documents

None

42 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

42.1 Released Incidents / Changes

This release contains the following fixes/changes:

CT Issue 317 Fixes to the following Fleet Inspection processes:

- Can't complete item
- Can't complete service after adding item to empty fleet inspection - crashes device
- Search vehicle - no model entry required
- Search vehicle - not saving mileage
- Search vehicle - not defaulting to Fleet Inspection
- Search Vehicle - Unit type not showing description

42.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

42.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Note	On a fleet inspection, the Services screen will always show all tabs, but will not allow the user to switch tabs until at least one item (vehicle) has been added to the service.

42.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

42.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

42.6 Technical Changes & Special Notes

42.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

42.6.2 Special Notes

None

43 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

43.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

43.2 Related Documents

None

44 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

44.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 290

- Sort product list for Tyre systems

CTY Issue 284

- Remove Size from part search

44.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

44.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Part Search	Part search no longer allows the entry of Size.

44.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

44.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

44.6 Technical Changes & Special Notes

44.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

44.6.2 Special Notes

None

45 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

45.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

45.2 Related Documents

None

46 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

46.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 332

Fix setting product in part search.

An issue existed whereby the product selected on a part search from within UDF was not correctly storing on the results. This has now been corrected.

46.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

46.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

46.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

46.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

46.6 Technical Changes & Special Notes

46.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

46.6.2 Special Notes

None

47 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

47.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

47.2 Related Documents

None

48 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

48.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 335

- Fix saving product in part search results - now saves category (TYRE) model (vehicle type), size, diameter, load and speed correctly.

Fix issues adding blank row bug when building part search list - this is an internal bug that was affecting performance slightly, and does not affect end users.

Fix issue refreshing UDF - an issue existed whereby some UDF was not redisplayed when there were multiple service items (vehicles) on the service. This has been corrected. Note that this would not affect any existing configurations using the tyre system.

Fix "System Resource Not Closed" warning when building part search - - this is an internal bug that was affecting performance slightly, and does not affect end users.

Removed some debug code from service product masters - - this is an internal bug that was affecting performance slightly, and does not affect end users.

48.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

48.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Service	With the configuration of the system having Service Info UDF, it is now recommended that this version of the mobile application is used, as it resolves a potential problem displaying Info UDF.

48.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

48.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

48.6 Technical Changes & Special Notes

48.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

48.6.2 Special Notes

None

49 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

49.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

49.2 Related Documents

None

50 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

50.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 342

- Uppercase vehicle ID when creating and finding vehicles on the mobile device. Previously this allowed upper and lowercase, which was causing issues. Now the device forces uppercase of all vehicle IDs.

CTY Issue 349

- Axle Type missing from device - when creating a new vehicle, the axle type was missing, which led to reduced functionality on the service report (i.e. all axles displayed as generic axles). This has now been resolved.

50.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

50.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Vehicle Search/New Vehicle	The application now enforces vehicles are created with uppercase vehicle IDs (reg or fleet numbers). As there is significant data already in the system with lower-case vehicle IDs, it should be noted that this data should not be used and cannot be used on the device when searching, although existing vehicles with lowercase IDs can be used if selected from the list.

50.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

50.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

50.6 Technical Changes & Special Notes

50.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

50.6.2 Special Notes

None

51 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

51.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

51.2 Related Documents

None

52 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

52.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 369

Confirm deletion of service product;

Change default click action on Service Product to Details (if present) rather than Delete.

52.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

52.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Tyres (Service Products)	The application now defaults to Details on the list rather than Delete, so take care in selecting the correct option.
		If delete is selected, there is now a confirmation dialogue.

52.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

52.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

52.6 Technical Changes & Special Notes

52.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

52.6.2 Special Notes

None

53 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

53.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

53.2 Related Documents

None

54 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

54.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 376

- Fixed an issue where an additional job added to a load does not display removed products correctly.

54.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

54.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Tyres (Service Products)	No changes

54.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

54.5 Related Releases

There are no related releases, although it is strongly recommended that EPOD server release 4.5.1.11 is released along-side this change, to enable previously released system functionality and essential bug fixes.

54.6 Technical Changes & Special Notes

54.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

54.6.2 Special Notes

None

55 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

55.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

55.2 Related Documents

None

56 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

56.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 378/280

Resolved some Vehicle Search UI Issues:

- Display customer and location name when searching;
- Clear location name when location is clicked on;
- Customer cannot be edited;
- Always default customer in search, whether this is being displayed or not;
- Set maximum length of customer and location to maximum for CTMS.
- Status of vehicle search results now sets the border colour.

56.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices
CTMS	Configuration	For those customers using EPOD linked to CTMS, the display of customer is linked to the system parameter configuration EPOD_OWNER_CONFIG being set against the cost centre to value "C".

56.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Add Vehicles/Vehicle Search	<p>The vehicle search screen now displays the customer and location description. Note that this is dependent on the OWNER ID and NAME being set against the jobs.</p> <p>The customer cannot be changed.</p> <p>Whether the customer is displayed in this screen or not, it will be applied as criteria to the search, as it is required.</p> <p>When you click on the Location parameter, the location name is cleared.</p> <p>When results are displayed, the default for the screen is to now display the border of the row indicating the status (if the item has actions or not, the border will be red. This replaces the prior default configuration where the status was displayed by default within the row. This can be configured to be re-added to the results along with the border if required.</p>

56.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

56.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

This is a stand-alone release and fix to the Android application and completely resolves issue 280 (to display the customer and location name). However, regarding Issue 377 (whereby the location and customer were wrong on the search and the service report), further releases and configuration are required within Calidus TMS and the Calidus EPOD server (for the work report). ? CTMS requires configuration to set the Owner ID and name correctly. ? CTMS requires a change to revert a prior change whereby the location was set to the customer code incorrectly. ? EPOD requires a release to correct the display of the Invoice To, Supplied To and Location addresses on the Central Tyre service report. Until all of these releases are complete, Issue 377 remains open.

56.6 Technical Changes & Special Notes

56.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

56.6.2 Special Notes

None

57 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

57.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

57.2 Related Documents

None

58 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

58.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 388

- Resolved issue where vehicle services supplied are not passed back properly.

58.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

58.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
None		

58.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

58.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

This is a stand-alone release and fix to the Android application and completely resolves issue 388 (whereby vehicle services supplied are now passed back to the server).

However, the use of this information is not currently coded - so, neither EPOD service report currently displays this information nor does CTMS use this information to generate charges - both of these will be changed to do this under additional SCR 35, which has not yet been completed.

58.6 Technical Changes & Special Notes

58.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

58.6.2 Special Notes

None

59 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

59.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

59.2 Related Documents

None

60 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

60.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 392

- Fixed creating inspections for added vehicle.

CTY Issue 394

- If vehicle selected from lookup, not allowed to change values

60.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

60.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Vehicle Search	When selecting a vehicle from a search, the details are displayed. You are not allowed to change the details, and the screen now does not allow this.
		This does not affect when adding a new vehicle from scratch (Add New). The device now uses the information from a searched vehicle to create inspections, including all product, size and pressure information from the last inspection.

60.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

60.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

This is a stand-alone release and fix to the Android application and completely resolves issues 392 and 394 (whereby vehicle services supplied are now passed back to the server).

There are no related releases.

60.6 Technical Changes & Special Notes

60.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

60.6.2 Special Notes

None

61 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

61.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

61.2 Related Documents

None

62 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

62.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 327

- Display completion status of service products if required.

62.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

62.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Service Product Installation / Removal	<p>The device now clearly indicates the status of the products to be installed/removed/services supplied:</p> <p>If not yet complete:</p> <ul style="list-style-type: none"> • The border is grey as now. • Installations are shown as ?Install? • Removals are shown as ?Remove? • Other Work is shown as ?Supply Services? <p>If the complete (i.e. the details required have been entered against that line)</p> <ul style="list-style-type: none"> • The border is green • Installations are shown as ?Installed? • Removals are shown as ?Removed? • Other Work is shown as ?Services Supplied?

62.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

62.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

62.6 Technical Changes & Special Notes

62.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

62.6.2 Special Notes

None

63 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

63.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

63.2 Related Documents

None

64 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

64.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 528727

- Remove ability to add a new service item on anything except a fleet inspection

CTY Issue 531884

- Fixed issue with duplicate install records. Note: Not allowed to create a duplicate work type in that position any more - must delete the existing one first.

CTY Issue 524458

- Display Please Wait when doing a part search and selecting a part from the results

CTY Issue 528665

- Fix: prompted to complete or cancel the incomplete product lines when completing the service item (vehicle)

CTY Issue 532147

- not forced to cancel the removal and install when completing the service item (vehicle)

CTY Issue 524532

- Fix: Delete then add removal on same tyre position will display the new removal.

CTY Issue 527142

- Fix: Sending wrong product on line when creating a duplicate install i.e. for the same tyre position.

CTY Issue 524427

- Fix to removal being prompted twice.

64.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
None		

64.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Service Product Installation / Removal	Only a single product line for each work type can exist against a tyre position. If you want to replace an install, remove or other work line, you should first delete the existing line, then add a new one. Alternatively, just modify the existing line details.

64.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

64.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

64.6 Technical Changes & Special Notes

64.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

64.6.2 Special Notes

None

65 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

65.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

65.2 Related Documents

None

66 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

66.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 525358

- Now possible to reopen a cancelled item.

CTY Issue 526634

- No longer possible to edit torque settings after job is complete or cancelled.

CTY Issue 524458

- Fix ?Please Wait? message when changing a part search

CTY Issue 526792

- Display quantity on part search if available.

66.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
Client	Installation	The APK needs to be updated/installed on devices

66.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Usage	Service Product	For Part Search, the quantity can only be displayed when doing a part search in Elucid, and can only be displayed when searching for van stock or for customer stock.
	Installation / Removal	The quantity that can be displayed is only the quantity that is known in the vehicle at that time, not taking into account the products that are marked as being used on that service, or products that have been used on that service. Further, the device styling must be configured to display that information, which has not been completed as part of this change.

66.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

66.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

66.6 Technical Changes & Special Notes

66.6.1 Technical Changes

The following technical changes have been made as part of this release:

1. Build APK, which needs to be installed on the device.

66.6.2 Special Notes

None

67 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

67.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

67.2 Related Documents

None

68 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

68.1 Released Incidents / Changes

This release contains the following fixes/changes:

CTY Issue 534467

- Adding meaningful UDF validation error messages.

CTY Issue 533567

- Fix enablement of fields when first entering Services screen.

CTY Issue 533902

- Ensure activity (inspection) and product (tyre) colouration is retained when validating the item is complete.

CTY Issue 526634

- Force repopulation of whole screen including UDF when updating a service item (vehicle) to complete/cancelled, to ensure that UDF is not editable

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

69.2 Related Documents

None

70 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

70.1 Released Incidents / Changes

This release contains the following fixes/changes:

4.05.00.97

535385 - CTY - EPOD, tyre swap

- Fixed the Tyre Swap button displaying the form.

526944 -

- Fixed adding a new vehicle's inspections when adding a new vehicle on-line.

533682 -

- Make photobar comment visible but uneditable when view only.

534467 -

- Cleaned up some multi-lingual strings. Now displays more meaningful messages.

4.05.00.98

531884 -

- Fixed issue with duplicate positions (for same direction) being available in list when adding service product (tyre)

4.05.00.99

539888 - CTY - TMS, XML Files received by Elucid -

- Add restriction to accepted mileage values

539657 - CTY - EPOD, search for van stock

- Fixed bug where searching for parts and no position specified caused the app to hang.

535466 - CTY - EPOD, front screen missing customer info

- When creating a roadside service (in CTL, selecting the location from the map), the job is listed on the job list (on the device) showing the customer name instead of the generic order location.

4.05.01.00

541868 CTY - EPOD - Radio Buttons

- Ensured that the Services Supplied changes when the vehicle type changes.

4.05.01.01

542531 CTY - TMS, Reg not updating Elucid

- Fixed issue whereby reg is not properly populated and sent out from EPOD device

4.05.01.02

540658 CTY - EPOD, offline searches

- Fixed a bug where too many records in part search results causes the application to hang.

4.05.01.03

Bug 560334: Central - EPOD radio buttons not visible - UAT Ref 201

- Fixed bug when services supplied are not displayed when the product is not passed on a service product line.

70.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description

71.2 Related Documents

None

72 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

72.1 Released Incidents / Changes

This release contains the following fixes/changes:

Version 4.05.01.5

571323; CTY - EPOD inspection depths

- When a vehicle is added from the vehicle search the device will ignore any tread depth value returned and instead set the tread depth initial value on the created inspections to zero (so that the user has to enter a tread depth value)

Version 4.05.01.04

517615: CTY EPOD Device Vehicle Search shows vehicles already inspected in fleet inspection

- The vehicle search results will no longer include vehicles that can not be added to the current service because they already exist on the current service. Note that vehicles that exists on the current service will still be included in the search results (as they can be added)

72.2 Setup

Details of any system setup required by either Aptean or Client.

Topic	Action	Description
Service	Info	When amending the reg, the reg must be 12 characters or less. The device will validate this when you try to move tabs or save/complete the service.
Service	Add new vehicle	When trying to add a new vehicle, the reg must be 12 characters or less. The device will validate this when you try to add the new vehicle.

96.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

96.5 Related Releases

Android mobile device application release 4.5.0.0 must be active prior to this release.

97 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

97.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

97.2 Related Documents

None

98 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

98.1 Released Incidents / Changes

This release contains the following fixes/changes:

618144

- Fixed an issue where after the vehicle config was changed the position drop-down on the product search could include positions that were removed and could list the positions in the wrong sequence.

98.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description
None		

98.3 User Instructions

User details and instructions of the new or changed process

Topic	Action	Description
Service	When amending the reg, the reg must be 12 characters or less. The device will validate this when you try to move tabs or save/complete the service.	
Service	Add new vehicle	When trying to add a new vehicle, the reg must be 12 characters or less. The device will validate this when you try to add the new vehicle.

98.4 Performance Notes

It is not thought that this change will have any impact on performance although it is our recommendation that the performance of all areas of the application is validated during testing to ensure that performance is still good.

99 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

100 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

101 Related Documents

102 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

102.1 Released Incidents / Changes

This release contains the following fixes/changes:

- **624261**
 - ♦ Fixed an issue where, for jobs added to a load already on the device, service products deleted on the device are not include in the update back to the server, resulting in them not being deleted on the server (meaning they are still shown on the POD note and in Elucid). These are now correctly included in the update, marked as deleted and so are deleted on the server so not shown on the POD note or Elucid).

102.2 Setup

Details of any system setup required by either Aptean or Client.

103 Introduction

This document describes the contents of this Aptean POD - *Calidus* Edition device release.

103.1 Platforms/Databases

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

103.2 Related Documents

None

104 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

104.1 Released Incidents / Changes

This release contains the following fixes/changes:

631116

- Fixed an issue that meant service items (vehicles) could be updated with data from the server after the service item had been completed on the device.

631572

- Fixed an issue where service activity (inspection) data could be overwritten with the (empty) data from the server when the job/service item was updated

624285

- Fixed a potential issue where missing DDLL (Drop-Down List Lookup) field data could prevent UDF data (e.g. inspection data) from being saved.

104.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description

None

110 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

110.1 Released Incidents / Changes

This release contains the following fixes/changes:

637536 & 648690

- Added error trapping around the job completion and sending of messages processing to include information on any errors in the audit log. Note that these changes are not expected to resolve the issue but are a necessary step in identifying the cause of the issue.

110.2 Setup

Details of any system setup required by either Aptean or Client.

The release will be tested against & supported only for the following platform/database combinations:

- Android O/S 4.4.x Kit Kat or higher on previously verified devices

111.2 Related Documents

None

112 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

112.1 Released Incidents / Changes

This release contains the following fixes/changes:

650525 - Missing charge for order 5622

- To avoid issues with services supplied field not showing certain options (those limited to a certain tyre size) for service product records which do not yet have a product code/tyre set, a change has been made to use the service product lookup to force the user to specify the service product code before calling the UDF screen. This means that when the service product UDF is called we will always have a service product code/tyre set and so the services supplied field will include the appropriate tyre size dependent options (based on the tyre size of the selected/specified tyre).

662985 - no job update for job 7191 & 7290

- Fixed an issue which could prevent the device from sending an update for jobs that had been completed on the device (which prevented these jobs from showing as completed in other systems)

112.2 Setup

Details of any system setup required by either Aptean or Client.

By	Reference	Description

115.2 Related Documents

None

116 User Notes

This is a release of the Apteian POD - Calidus Edition device application.

116.1 Released Incidents / Changes

This release contains the following fixes/changes:

669624 Last page blank so cant input torque settings and job info

- Added a potential fix (since the issue cannot be replicated cannot be 100% certain that the coded fix will resolve the issue) for an issue that was preventing the device from showing the Diagnosis UDF (torque settings) and added some extra audit logging.

678898 jobs failed to complete from epod and produce invoice

- Added extra device side validation to prevent users from creating new vehicles with a reg ID with a length greater than 12 characters (to avoid issues processing the job update on the admin server due to field length constraints).

116.2 Setup

Details of any system setup required by either Apteian or Client.

118 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

118.1 Released Incidents / Changes

This release contains the following fixes/changes:

56101 No search criteria

- Made it so that, when searching for a service product, validation will ensure that the user has specified at least one of the search criteria (Tyre, Manufacturer or Description).

677138 Incorrect Job Type displayed on the device

- Fixed an issue where, when a new job was added to an existing load, the job/service type would incorrectly show as ?Fleet Inspection?.

120 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

120.1 Released Incidents / Changes

This release contains the following fixes/changes:

685782: CTY - Missing Service Items on device

- Added a change to the service product search to reject the selected service product if that product is a service item (a tyre service item, a vehicle service item or a removal service item). This is to prevent service items being updated to being a physical product and so no longer appearing in the list of service items.

124 User Notes

This is a release of the Aptean POD - Calidus Edition device application.

124.1 Released Incidents / Changes

This release contains the following fixes/changes:

657715: CTY - no DEL message sent for job 6538.

- A fix has been added for the possible situation where a mismatch between the service level status on the database and the data object could cause the device to count the service as an outstanding service on a completed job and so set the status that is returned to the server to D (causing the server to delete the service).

124.2 Setup
