EMERGENCY RELEASE - CTMS 11.0

RELNOTE ER037-001

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks
INT_XML_IN.sql	Inbound EDI Database Package	5.201	373052	IM01-IM02	3	The inbound EDI process will have new parameters available to set the ordered quantity for orders based on the weight of the order lines when an ordered quantity cannot be provided. An EDI parameter called CALC_ORD_DU_QTY can be set to Y to activate the new functionality. An EDI parameter called WEIGHT_BASED_DU_QTY can be set to Y to enable a calculation to be performed for the WEIGHT provided and the Max Kg of the DU type. The ordered quantity will then be based on the WEIGHT/Max Kg with the next whole number used. If this calculation is not supported by the absence of a WEIGHT provided or the Max Kg for the DU type, an EDI parameter called DFLT_DU_QTY can be set to a number to specify that a default number of DUs will be ordered. Note the EDI parameter VOLUME_BASED_DU_QTY_QTY overrides the weight calculation and default.

Ready for **What's Next, Now**™
