

EMERGENCY RELEASE - CTMS 12.0

RELNOTE ER CTMS 048-025

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks
DATA_ADM_SYSTEM_PARAM_810540.sql	Data Script	1.1	810540	-	1	<p>The system parameter 'LOOKUP_FOR_ROUTE_CODES' has a new value of 'V' to enable the route code to be validated from the list of values.</p> <p>The orders will be provided with a, 'ORDER_WMS_STATUS', 'RUN_NUMBER' and a 'DROP_NO' by MuleSoft to be used in the scheduling engine. The WMS status will control the type of automatic scheduling that will be performed: Pre-invoiced ('Open') orders will refer to the advised run number and drop number to find a route for the trip and the validation of the route will not apply. The advised drop number will be used instead of the drop number of the route details for the location for the run number. Post-invoiced ('Invoiced') orders will search for the next available route and the validation of the route will apply. The advised drop number will be used instead of the drop number of the route details for the location for the run number. The next available route will be found for an order that does not have a 'RUN_NUMBER', for example for a rebooked order.</p>
