

## EMERGENCY RELEASE - WMS 810

RELNOTE ER046-004

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks
DP_RDT_LOCENQ.sql	RDT Location Enquiry	4.36	04068311	-	3	<p>A previous change on log 03737436 prevented stock in a defined pick location from being selected to replenish another defined pick location for a stock code with two defined pick locations.</p> <p>This change is to allow a pallet in a second pick location to be used to replenish the first pick location, but not allow the pallet in the first pick location to be used to replenish another pick location.</p> <p>The first/second pick location will be determined by the sequence number entered for the locations against the stock code. The pick location with the lowest sequence (e.g. 1) will be deemed to be the first/primary pick location which may be replenished from a second pick location with a higher sequence (e.g. 2).</p>
