

## EMERGENCY RELEASE - WMS 810

RELNOTE ER046-006

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks
DP_WHS7872.sql	RDT Moves	4.67	667947	-	2	<p>Internal log raised when issue found during testing of log 04066270.</p> <p>A change has been made to the RF replenishment process to fix an issue where the allocated qty on the pallet record was set incorrectly if there was already a quantity in marshalling. The change ensures that the record for the correct location is selected.</p> <p>If an order for a part pallet is pick confirmed a new pallet record is created for the marshalling location with the allocated quantity, leaving the remaining quantity on the pallet in the original location. If a new order is allocated from the same pallet and an RF replenishment is created to move the pallet to the pick location the allocated quantity in the pick location after the move should be that allocated to the new order and not that already in the marshalling location.</p>
