

EMERGENCY RELEASE - WMS 810

RELNOTE ER046-007

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks
DP_RDT_LOCENQ.sql	RDT Location Enquiry	4.37	04081469 -		2	<p>This is a correction to the change made on log 04068311. The putaway priority is now used to determine which is the primary pick location instead of the sequence.</p> <p>The Select Replen procedure will now find the defined pick location with the lowest putaway priority value and treat that locations as the primary pick location and any other defined pick location as a secondary pick location.</p> <p>A pallet in a secondary pick location can be selected to replenish the primary pick location but a pallet in the primary pick location cannot be selected to replenish a secondary pick location.</p> <p>Example: Stock code 40072300 has two defined pick locations, 06AA23AA with putaway priority 1 and 06AA23BB with putaway priority 2. This change will allow a pallet in location 06AA23BB to be selected to replenish location 06AA23AA but a pallet in location 06AA23AA will not be selected to replenish location 06AA23BB.</p>
