EMERGENCY RELEASE - WMS 810

RELNOTE ER046-008

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks
DP_RDT_LOCENQ.sql	RDT Location Enquiry	4.38	04073788	-	3	A new owner rule RFSP (Replenish From Secondary Pickface) has been added to the RF Select Replen procedure. If the rule is set to "Y" and the stock code has more than one assigned pick face the primary pick face will be identified as that with the lowest putaway priority (e.g. 1). It will then select the pallet in the secondary pick face if available, before checking other pick locations. If no stock available in a pick location it will select from bulk following the allocation sequence of the stock code. If the rule is set to "Y" but the stock code only has one defined pick face it will look for a pallet in another pick location first and select that to replenish pick face if available. If nothing available in pick it will select from bulk following the allocation sequence of the stock code. If the rule is not set to "Y" it will just select from bulk following the allocation sequence of the stock code, it will not look for pallets in pick locations. The process will also check the SELL warehouse rule to determine whether the sell-by date selection should be inclusive or exclusive of the expiry date.
DATA_WAREHOUSE_RULES_CONTROL_04073788.sql	Add new owner rule	4.1	"	"	"	"
