1 SUMMARY INTRODUCTION

1.1 INTRODUCTION

The main aim of this document is to provide *CALIDUS* WMS users with the level of detail required to accurately test all software included in the patch. The document also contains set-up and configuration details to enable the user to configure the system correctly for the new functionality to work.

1.1.1 GLOSSARY OF TERMS

Term	Meaning
C-TMS	Transport Management System
C-WMS	Warehouse Management System
CR	Change Request
C-WCS	Warehouse Control System
C-ePOD	Electronic Proof of Delivery
C-MCS	Mobile Control System
C-TTM	Track and Trace Management
EDI	Electronic Data Interchange
TID	Testing Issue Development, or Log

1.2 TESTING PROCESS

1.2.1 TIDs AND RESOLUTION

If there are any areas of the functionality that are not acceptable or do not meet the requirement specified in the Change Request then these should be expressed by raising a TID.

1.2.2 FINAL 'END TO END' TESTING

Prior to release to a production database, a full 'End to End' test is required on the test system by all sites using the database. Once this is signed off, a release date can be arranged.

1.2.3 AUTHORISATION

Authorisation from nominated release personnel only will be required when requesting a release to a production environment

2.11 Customer Ref: HP-AM7K8G

OBS Log Number: 342923
Reporter: Hiren Patel
Summary of Call RIO: Require POD Information
 A new EDI process will need to be setup to process the POD_INFO files to be transferred to DHL Link. The FTP Server will need to be setup unless the existing flow for TRIPXML files can be used: this directory structure is used for LOAD, CITD and Electronic Manifest files.

A new system parameter OMS_CREATE_POD will need to be configured for the appropriate customers of the orders to generate the POD_INFO files. The POD_INFO files will be triggered when the delivered quantity of an order line is changed and the order line has not been zero packed. The delivered quantity will be compared to the despatched, packed or ordered quantity of the order line to assess the status of the order as SUCCESS, FAILED, PART DELIVERED or PART UNDELIVERED.

Note that a status of PRE DELIVERY will be used should a control record be generated and then the delivered quantity be removed. A POD_INFO file will be generated for each order and it will contain its current trip and debrief information with a vertical bar as a fixed delimiter. Note that if multiple signatories have been recorded, e.g. the order has been delivered at different times, these signatories will be listed together.

The EDI process will use the following report values:

1.

Title: Process Name

Name: P_PROCESS_NAME

Value: POD_INFO

2.

Title: Package Name

Name: PROCESS

Value: DP_CSV_POD.P_PROCESS_CSV_POD

See FS-342923 for further information.

3.4 Customer Ref: 15/05/17 - Release

OBS Log Number: 343046
Reporter: Michelle Naumovski
Summary of Call Testing issues following release
 The labels can be produced with the appropriate on-forwarding carrier and routing codes. The labels can be produced via the packing process as Zebra labels (for Standard and non-Standard delivery type orders), via the reports menu as an Oracle report (LFS_LABEL), or via import files from Portal as an Oracle report (LFS_LABEL_MULTI).
Detail of Change/Fix The on-forwarding carrier will be either the predicted or the actual carrier for the delivery leg of the order. The routing codes will be displayed for the destination zone and or a via zone depending on the predicted routing or the actual routing.
 If the order is predicted to be delivered out of another depot the via zone will be displayed as long as it differs to the destination and origin zones for the order. Once the order has been transported to another depot the via zone will be displayed as long as it differs to the destination and origin zones for the order.
