1 SUMMARY INTRODUCTION

1.1 INTRODUCTION

The main aim of this document is to provide *CALIDUS* TMS users with the level of detail required to accurately test all software included in the patch. The document also contains set-up and configuration details to enable the user to configure the system correctly for the new functionality to work.

1.1.1 GLOSSARY OF TERMS

Term	Meaning
C-TMS	Transport Management System
C-WMS	Warehouse Management System
CR	Change Request
C-WCS	Warehouse Control System
C-ePOD	Electronic Proof of Delivery
C-MCS	Mobile Control System
C-TTM	Track and Trace Management
EDI	Electronic Data Interchange
TID	Testing Issue Development, or Log

1.2 TESTING PROCESS

1.2.1 TIDs AND RESOLUTION

If there are any areas of the functionality that are not acceptable or do not meet the requirement specified in the Change Request then these should be expressed by raising a TID.

1.2.2 FINAL 'END TO END' TESTING

Prior to release to a production database, a full 'End to End' test is required on the test system by all sites using the database. Once this is signed off, a release date can be arranged.

1.2.3 AUTHORISATION

Authorisation from nominated release personnel only will be required when requesting a release to a production environment

Set-up and Configuration	No set-up/configuration required

3.2 Customer Ref: Label Printing

OBS Log Number:	345373
Reporter:	Daniel Hammond
Summary of Call	Electronic Manifest - Label Printing Changes have been made to the order packing processes to ensure that the packed date is set after all of the labels have been printed. If labels are not required, the packed date of the order will still be set.
Detail of Fix	These changes apply to manual packing, XML packing and CIPD packing processes. Repacked orders will also update the packed date. The electronic manifest will include the recently packed orders that have tracking references. The electronic manifest will include all orders that exist with tracking references when the first file is produced. The electronic manifest will include all of the orders with tracking references that have been packed since the last manifest file was produced. The concurrent processing of order packing and the electronic manifest will not include the orders that are currently being packed. The carrier POD files will update the order/consignment. The order will be updated with a delivered quantity for its lines and subtotalled for the order. If a valid reason code is not derived the order will be updated as fully delivered by default. If the reason code is not valid, a non-conformance will not be recorded for the order. If a valid reason code or type 'FAILURE' is derived the order will be updated as not delivered.
Set-up and Configuration	No set-up/configuration required

Summary of Call	V_ORD possible trip
Detail of Fix	The external planning systems need to base their distances in the same unit of measure that CTMS has in its system parameter called GEO_DT_DISTANCE_UNITS (for example 'MILES').
	The distances for the trip and its stops will be stored in this unit of measure.
	The database view for the possible trips for the orders will use the specified unit of measure for the total distance of the trip and the near distance.

The hours percentage will be based on the stopover threshold hours for either the carrier of the trip or the system parameter TRM_DFLT_MAX_DRV_HRS_WO_STOPOVER for the cost centre of the trip.

The Total Distance of the trip will be displayed in the trip planning screens in the specified unit of measure to match the distances between the stops on the trip.

Summary of Call	Audit Messages from Sched Engine The orders for the Home Delivery Network scheduling engine will not continue to be processed automatically when they have been assessed for the current state of the routes and with reference to a new flag for the postal regions. An order can be processed automatically when it is unscheduled or it has been crossdocked but if the order cannot be collected or fully delivered after processing, the order will require manual scheduling so that it is not resubmitted continuously. If the setup is changed to enable orders to be processed further, the 'Manual Schedule' flag for the order will need to be removed. The postal regions can be setup with a new flag to indicate if the scheduling engine will assess 'RADIAL' fixed routes and which type of trip is available:
Detail of Fix	1. None (default when not specified): Orders will not be collected or delivered but they may be trunked. 2. Collection Only: Orders may be collected into their local planning depot when they are unscheduled. 3. Delivery Only: Orders may be delivered to their final location out of their local planning depot when they are unscheduled or they have been crossdocked. 4. Collected and Delivery: Orders may be collected and delivered at their local planning depot. The scheduling engine will assess the 'from' and 'to' locations of the order to obtain the local planning depot and assess the 'Radial Routing' flag as described above. The 'Radial Routing' flag will be present in the 'Static Data Maintenance' screen in the 'Region Data' page for the postal regions. A dropdown list of values will be available for selection.

 The order time windows will be updated when the booking status is changed to OFFERED, HELD or released to NOT BOOKED. Delivery orders will only update the delivery time windows. Only the delivery time window will be based on the offset days for the schedule rule from the late available date and time.

Detail of Fix The delivery time window will be specific to the 4 hour window when the ordered is OFFERED.

Collection time windows will update the available and delivery time windows: the available and delivery time windows will be aligned except when the order is OFFERED, then the available time window will be specific to the 4 hour window and the delivery time window will extend from the early available date and time to the number of offset days for the schedule rule.
