1 SUMMARY INTRODUCTION

1.1 INTRODUCTION

The main aim of this document is to provide *CALIDUS* TMS users with the level of detail required to accurately test all software included in the patch. The document also contains set-up and configuration details to enable the user to configure the system correctly for the new functionality to work.

1.1.1 GLOSSARY OF TERMS

Term	Meaning
C-TMS	Transport Management System
C-WMS	Warehouse Management System
CR	Change Request
C-WCS	Warehouse Control System
C-ePOD	Electronic Proof of Delivery
C-MCS	Mobile Control System
C-TTM	Track and Trace Management
EDI	Electronic Data Interchange
TID	Testing Issue Development, or Log

1.2 TESTING PROCESS

1.2.1 TIDs AND RESOLUTION

If there are any areas of the functionality that are not acceptable or do not meet the requirement specified in the Change Request then these should be expressed by raising a TID.

1.2.2 FINAL 'END TO END' TESTING

Prior to release to a production database, a full 'End to End' test is required on the test system by all sites using the database. Once this is signed off, a release date can be arranged.

1.2.3 AUTHORISATION

Authorisation from nominated release personnel only will be required when requesting a release to a production environment

Set-up and Configuration	No set-up/configuration required

5.5 OBS Log Number: 346772

Reporter:	Tony Walker
Summary of Call	TID: UNLOAD message
Detail of Fix	A database script will alter a database table to extend the length of the event type for the TMS-WMS interface control records.
Set-up and Configuration	No set-up/configuration required

5.6 OBS Log Number: 346777

Reporter:	Tony Walker
Summary of Call	TID: WMS Parameters and Contacts
Detail of Fix	New message events for WMS_INT_FAIL for the WMS-TMS interface records.
	Message requests can be setup in TMS:
	Message type: WMS_INT_FAIL
	Medium: SMS or EMAIL
	Trigger: ORD, ORDA, ALC, PLIST, LOA, PACK or MAR
	Subject: Order Creation, Order Amendment, Allocation, Pick List, Pick Confirmation, Pack Confirmation or Despatch Confirmation
	Format: <ERR_MSAGE> (this will insert the error message in the EMAIL or SMS)
	Triggers can also be setup for DBAI (database connectivity problems between WMS and TMS) or DBAO (database connectivity problems between TMS and WMS).
	Each message trigger is optional.
	These message events can be reviewed in the Medium Audit page in the Messaging Maintenance screen where the message events will also be setup in TMS.

The interface records themselves can be reviewed in the TMS-WMS and WMS-TMS pages in the Interface Errors screen as usual.

The owner in WMS can be setup to have an email address per interface message type and these addresses will be used to send emails for failed processes in WMS should they exist.

If they do not exist the equivalent message requests in TMS will be used (excepting database connectivity problems which must be generated out of the processing database).

If email or SMS are not setup a user will not be informed of any problems with the processing of the interface records.

Note that the database connectivity problems will require the message to be setup for MTS_OWNER user to control the message request and the recipients.

For this reason the WMS Params page in the Location Maintenance screen can be used to store the contacts for new 199 (WMS to TMS) and 299 (TMS to WMS) message types.

No set-up/configuration required

5.25 OBS Log Number: 347862

Reporter:	Dave Meir
Summary of Call	Issues with Label Printing
Detail of Fix	Changes to label
Set-up and Configuration	No set-up/configuration required

5.26 OBS Log Number: 347880

Reporter:	Dave Meir
Summary of Call	Label date is in the past The collection/job date for UKMail consignments will be offset by the required number of days: The greatest value of the new system parameter 'CARR_SRVCE_LEVEL_OFFSET_DAYS' for the cost centre of the order and the carrier service level of the route for the trip. Note that if the system parameter is not set, a default value of 1 day will be used to compare to the carrier service level.
Detail of Fix	The calculated collection/job date will be moved backwards to the previous working day of the route. AAM is expected to set the carrier service level to 0 and the system parameter to 0: the collection/job date will then match the planned trip stop date for their overnight deliveries. HCR is expected to set the carrier service level to 0 but not set the system parameter and thus use the existing default value of 1 for the system parameter that will not be configured: the collection/job date will then be the previous date to the planned trip stop date for their next day deliveries. Therefore, not setup changes will be required for HCR.
Set-up and Configuration	No set-up/configuration required

5.27 OBS Log Number: 347881

Reporter:	Dave Meir
Summary of Call	Issues with HB3 Item Interface The 'PROC_ITEM_FIX' import process has been changed to enable dealerships to be identified based on a decoded location when the file is first processed and when the failed file is reprocessed.
Detail of Fix	The dealership must exist decoded to a location for the order to be identified. The dealership can be stored up to 15 characters in length and decoded to a location up to 12 characters in length. The OMS reference will be stored for the interface audit file when the order is created or updated successfully when the file is first processed or the file is reprocessed.
Set-up and Configuration	No set-up/configuration required

5.28 OBS Log Number: 347908

Reporter:	Dave Meir
Summary of Call	Planning configure layout no oversize
Detail of Fix	Add Oversize to the Order well in the Planning screen
Set-up and Configuration	No set-up/configuration required

5.29 OBS Log Number: 347910

Reporter:	Dave Meir
Summary of Call	LOTS message trigger/CSV upload
Detail of Fix	Prevent updates of the external reference on existing orders which then trigger LOTS messages.
Set-up and Configuration	No set-up/configuration required

5.31 OBS Log Number: 348282

Reporter:	Matthew Tipping
Summary of Call	Loading Mgt screen. Hardcoded Trip sheet
Detail of Fix	Add additional menu item to print a trip sheet, specified in the TRIP_SHEET system parameter
Set-up and Configuration	

New Parameters

Parameter Name	Config Level	Setting Value	Result
TRIP SHEET	COST CENTRE	Y	Trip sheet report to run

5.32 OBS Log Number: 347849

Reporter:	Paul Roscoe
Summary of Call	Control records for manifests for trips A control record for the electronic manifest will be generated for the trip when the first order is assigned to the trip.
Detail of Fix	Any change of trip status or addition of an order to the trip will then generate a new electronic manifest with any changes.
Set-up and Configuration	The file will be generated if the PROCESS_INTERVAL is set to a number of minutes, no minutes or the EDI parameter does not exist (assessed as no minutes). No set-up/configuration required
