1 SUMMARY INTRODUCTION

1.1 INTRODUCTION

The main aim of this document is to provide *CALIDUS* TMS users with the level of detail required to accurately test all software included in the patch. The document also contains set-up and configuration details to enable the user to configure the system correctly for the new functionality to work.

1.1.1 GLOSSARY OF TERMS

Term	Meaning
C-TMS	Transport Management System
C-WMS	Warehouse Management System
CR	Change Request
C-WCS	Warehouse Control System
C-ePOD	Electronic Proof of Delivery
C-MCS	Mobile Control System
C-TTM	Track and Trace Management
EDI	Electronic Data Interchange
TID	Testing Issue Development, or Log

1.2 TESTING PROCESS

1.2.1 TIDs AND RESOLUTION

If there are any areas of the functionality that are not acceptable or do not meet the requirement specified in the Change Request then these should be expressed by raising a TID.

1.2.2 FINAL 'END TO END' TESTING

Prior to release to a production database, a full 'End to End' test is required on the test system by all sites using the database. Once this is signed off, a release date can be arranged.

1.2.3 AUTHORISATION

Authorisation from nominated release personnel only will be required when requesting a release to a production environment

Summary of Call	TMS / WCS Loading The WMS-TMS interface will set the current location of the order items when the corresponding sales order is pick confirmed and/or pack confirmed.
Detail of Fix	The current location will be obtained from the bay number of the despatching trip or by default from the WMS parameters called DEFAULT_BAY_LOCATION. This default parameter will need to be created for the despatching depot with a valid grid location that is known as a WCS location.

Set-up and Configuration

New Parameters			
Parameter Name	Config Level	Setting Value	Result
DEFAULT_BAY_LOCATION	WMS Interface	A WCS ?grid? location	This default location will be used for the current location of the order items when they are created via the ?MAR? and ?PACK? messages in the WMS-TMS interface should the despatching trip not have a bay location.

GEO TOMTOM TRIP EN-ROUTE	SYSTEM	Y/N	Will change trip status from ACCEPTED to EN-ROUTE via TomTom

5.19 OBS Log Number: 351038**Summary of Call**

WMS-TMS interface collection times

This new logic for the transport orders via the WMS-TMS interface from the sales orders will be based on a new WMS parameter called APPLY_COLL_OFFSET being set to Y in the despatching depot/warehouse in TMS.

Detail of Fix

This WMS parameter can be set for the ORD/ORDA message type 101 in the Locations maintenance screen for the depot (it is not required at the customer level because the schedule rules will be created at the customer level).

Set-up and Configuration

New Parameters			
Parameter Name	Config Level	Setting Value	Result
APPLY_COLL_OFFSET	Location WMS Parameter	Y	The collection/available time windows for the transport order will be based on schedule rules should they exist for the cost centre, customer, service level and location zones. The location zones will be based on the delivery locations for the customer groups in WMS. The delivery date of the corresponding sales order will be used to assess when the collection date will be.
APPLY_COLL_OFFSET	Location WMS Parameter	N	The collection/available time windows for the transport order will be based on the booking date of the corresponding sales order.

5.20 OBS Log Number: 351388**Summary of Call**

Hold MAR order messages when exclude r/l

Assesses the presence of a storage location on the picking containers for MAR messages by route/load as well as by sales order and for packs.

Control records by sales order will be placed on hold if they are missing, a later control record by route/load will then omit the sales orders with missing storage locations and process the ones that do have them.

Detail of Fix

Control records by sales order will be actioned if they are not missing and there is a later control record by route/load that will then process the sales order.

The WCS despatch bay locations for the marshalling racking will be created automatically for the marshalling racking as well as the marshalling location for the MAR and PACK messages.

The WMS Status in the Planning screen will display the date and time when the status was last updated. No set-up/configuration required

Set-up and Configuration**5.21 OBS Log Number: 351440****Summary of Call**

Enable the 441 message to delete items

Transport order items that are deleted after they have sent a 441 message to WCS as a loading request will send a new 441 message to WCS to delete the previous request.

Detail of Fix

The WMS-TMS interface will not delete any transport order items that have been updated as successfully loaded at the depot with a reason code of SL, UL, OL or ML.

Set-up and Configuration

No set-up/configuration required

5.22 OBS Log Number: 351922

Summary of Call	WMS-TMS interface staying at PROCESSING
Detail of Fix	If an exceptional error occurs during processing the record status of the control record will be updated to FAILURE from PROCESSING and the control record will need to be reprocessed after the error message has been reviewed.
