### 3.2 Customer Ref: Configurable EDI

<b>OBS Log Number:</b>	357756
<b>Summary of Call</b>	Configurable EDI - Performance Issues The following configurable EDI user message types will be changed to run using control records instead of directly creating the temporary records to produce the files for the EDI process:  ADJUSTMENTS ADJ_FCT JNL_DTL ADHOC_MOVES MOVEMENTS  The existing EDI processes will have their commands updated to either CONF_EDI2 or CONF_EDI2F so that they run using the new control method.  Command CONF_EDI2F will create the file for command CONF_EDI2 and then FTP the file using command FTP_OUTM if the existing EDI process is configured to FTP the file.  Command CONF_EDI2 will run process 'dp_conf_edi_out.produce_file_from_control' to replace 'dp_conf_edi_out.produce_dyn_edi_files'.  This means that any new EDI processes that are setup for the configurable EDI messages will need to use these new commands to produce the files.  NOTE: The database jobs will be stopped for the release process and then restarted.  This change will be for EDI processes that are going to generate files for configured user messages for the 5 trigger points for stock adjustments and stock movements.  This development will require some jobs to be stopped and restarted in WMS and these EDI processes can be identified by the records that are written to the database table 'PROGRAM_AUDIT_TRAIL' with 'PROGRAM_ID' = 'RELEASE_357756': the process code will be displayed in the 'DESCRIPTION' column.
