EMERGENCY RELEASE - WMS 810

RELNOTE ER032-011

Module	Program Name	Ver	Call/Iss	Client Ref	Pr'ty	Remarks
DATA_1_XF_COMMAND_357756.sql	Data Script	4.1	357756	-	2	The following configurable EDI user message types will be changed to run using control records instead of directly creating the temporary records to produce the files for the EDI process: ADJUSTMENTS ADJ_FCT JNL_DTL ADHOC_MOVES MOVEMENTS The existing EDI processes will have their commands updated to either CONF_ED12 or CONF_ED12F so that they run using the new control method. Command CONF_ED12F will create the file for command CONF_ED12 and then FTP the file using command FTP_OUTM if the existing EDI process is configured to FTP the file. Command CONF_ED12 will run process 'dp_conf_edi_out.produce_file_from_control' to the 5 trigger points for stock adjustments and stock movements. This development will require some jobs to be stopped and restarted in WMS and these EDI processes can be identified by the records that are written to the database table 'PROGRAM_AUDIT_TRAIL' with 'PROGRAM_ID' = 'RELEASE_357756': the process code will be displayed in the 'DESCRIPTION' column.
