1138755	1138755005	ESK MED	WETICE	ESK_M		0	0		0	0		RDCMEL LOGICAL FREIGHT SOLUTIONS MELBOURNE

The header section will contain details for the trip, as displayed above.

The detail section will contain the following information/read-only fields:

- *Calidus* TMS Order Reference
- Product Code
- Product Description
- Product Type
- Container Type/UOM
- Planned Quantity - the *Calidus* TMS Planned values
- Actual Quantity - If the actual quantities already exist they will be displayed, else if the actual quantities are null then the planned quantities will be displayed. If required and by exception, the user can amend the actual quantities (which will highlight the changed quantities by surrounding the text-box with an amber highlight). Other than validating that the input is a positive number less than the maximum value, no other validation will be performed on the quantity fields. Quantities over the planned qty will be permitted.

An 'Update' button will be available at the base of the page to confirm the entered (or defaulted) quantities back to the *Calidus* TMS. **Note:** It is assumed that debrief entry into the *Calidus* Portal screens will override any values already updated from any automated debrief updates into *Calidus* TMS.
