1.1 Ad Hoc Stock Take Report WHS7851.....1

1 Ad Hoc Stock Take

Warning: This is an incomplete guide.

This document is intended to show the process of ad hoc stock take. This is intrinsically linked to WCS processing.

The WCS has functionality to allow a user the ability to check and note adjustments to any pallet in any location in the warehouse. This process also allows them to note pallets to be added to empty locations.

This information is passed back to WMS, where it may be reported on. This can then be used to perform adjustments or complete a normal **Stock Take** to double-check and adjust.

1.1 Ad Hoc Stock Take Report WHS7851

Warning: This is an incomplete guide.

The Ad Hoc Stock Take Report reports on the checks that have been completed by the WCS users.

You may enter the following criteria to select checks that have been made:

- *Stockist From*
- *Date From/To*
- *Stock Code From/To*
- *Location Code From/To*

You can choose to report only *Discrepancies*, or *All* checks matching the criteria.

You can sort the report in *Stock* or *Location* sequence.

You can then click **Report** to run the report.

1.1.1 Ad Hoc Stock Take Cleardown WHS7852

The Ad Hoc Stock Take Cleardown removes the checks that have been completed by the WCS users.
