This is the Voyage Schedule Parameters screen (FMS8400).

The following fields document the report criteria:

Field Name Description

Vessel The code and name identifying the vessel for the schedule.

Voyage Reference The unique reference number for the voyage.

Alternate Voyage Reference An alternative or secondary reference number for the voyage.

Schedule A drop-down menu allowing selection of All, Operational or Proforma schedules.

Action Buttons:

• Produce Report: Generates the Voyage Schedule Report based on the specified parameters.

Contents

1 FSS1000	1
1.1 Vessel Capacity & Allocation	1
2 FSS1010	7

1 FSS1000

This is the Vessel Space Template screen (FSS1000).

The following fields define the vessel and service:

Field Name Description

User The identifier for the user creating or querying the template.

Service The shipping service or route identifier.

Vessel The unique code and name for the vessel.

Vsa Template No The unique reference number for the Vessel Service Agreement (VSA) template.

1.1 Vessel Capacity & Allocation

These read-only fields display the vessel's capacity and the current allocations:

Field Name Description

Vessel Capacity The total carrying capacity of the vessel in a primary unit.

TEU The capacity or allocation measured in Twenty-foot Equivalent Units.

DWT The capacity or allocation measured in Deadweight Tonnage.

Reefer Points The number of available refrigerated container plugs (Reefer Points).

1.1.1 Port of Call Details

This table displays the sequence and allocation details for each port of call on the voyage:

Field Name	Description
Principal	The main entity or line associated with the booking.
Port of Call	The code and name of the port stop.
Booking Agent	The agent responsible for bookings at this port.
Seq Number	The sequential number indicating the order of the port call on the voyage.
TEUs	The space (in TEUs) allocated to this port.
Weight	The space (by weight) allocated to this port.

Field Name Description

Reefer Points The number of Reefer Points allocated to this port.

Local Allocation The total allocation available for local cargo.

You can see/set transshipment llocations for the Port using the **T/S** button.

Action Buttons:

- Copy: Copies the current template to a new template or vessel.
- Resequence: Reorders the ports in the grid based on the updated Seq Number fields.

2 FSS1010

This is the Vessel Space Allocation screen (FSS1010).
