

This is the *Pallet Movement Request Screen (WHS0500)*.

 **Note:** This screen has been superseded by the Stock Movements screen [WHS0700](#).

The screenshot shows the Calidus (3PL) v810.020.13 software interface for the Pallet Movement Request Screen (WHS0500). The window title is "Pallet Movement Request Screen". The top menu bar includes "Action", "Edit", "Query", "Block", "Record", "Field", "Window", and "Help". The toolbar below the menu contains icons for file operations like Open, Save, Print, and various search and filter functions. The status bar at the bottom left shows "Record: 1/2" and "OSC". The main area displays a grid of movement requests with the following columns: Pallet Id, Audit No, Rotation No, Stock, Cust Rotation No, Bonded, Owner, Location From, and Location To. The grid shows two rows of data, with the first row being highlighted in blue. The "Audit No" field in the first row contains "1846". The "Confirm" button is located in the top right corner of the input field for "Audit No". The status bar at the bottom right shows the date "12-NOV-2025" and the version "WHS0500 v4.14".

The following fields document the request parameters:

Field Name **Description**

Audit No The unique audit number for the movement request.

The following data columns are displayed in the movement grid:

Column Name **Description**

Pallet Id The unique identifier for the pallet being moved.

Audit No The audit number associated with the pallet's movement.

Rotation No The system rotation number of the stock on the pallet.

Cust Rotation No The customer's rotation number for the stock.

Stock The unique stock code on the pallet.

Bonded Status indicating if the stock is bonded.

Owner The owner code for the stock (Display only).

Location From The current warehouse location of the pallet (Display only).

Location To The intended destination warehouse location for the pallet.

Text A free text field for notes related to the movement.

Action Buttons:

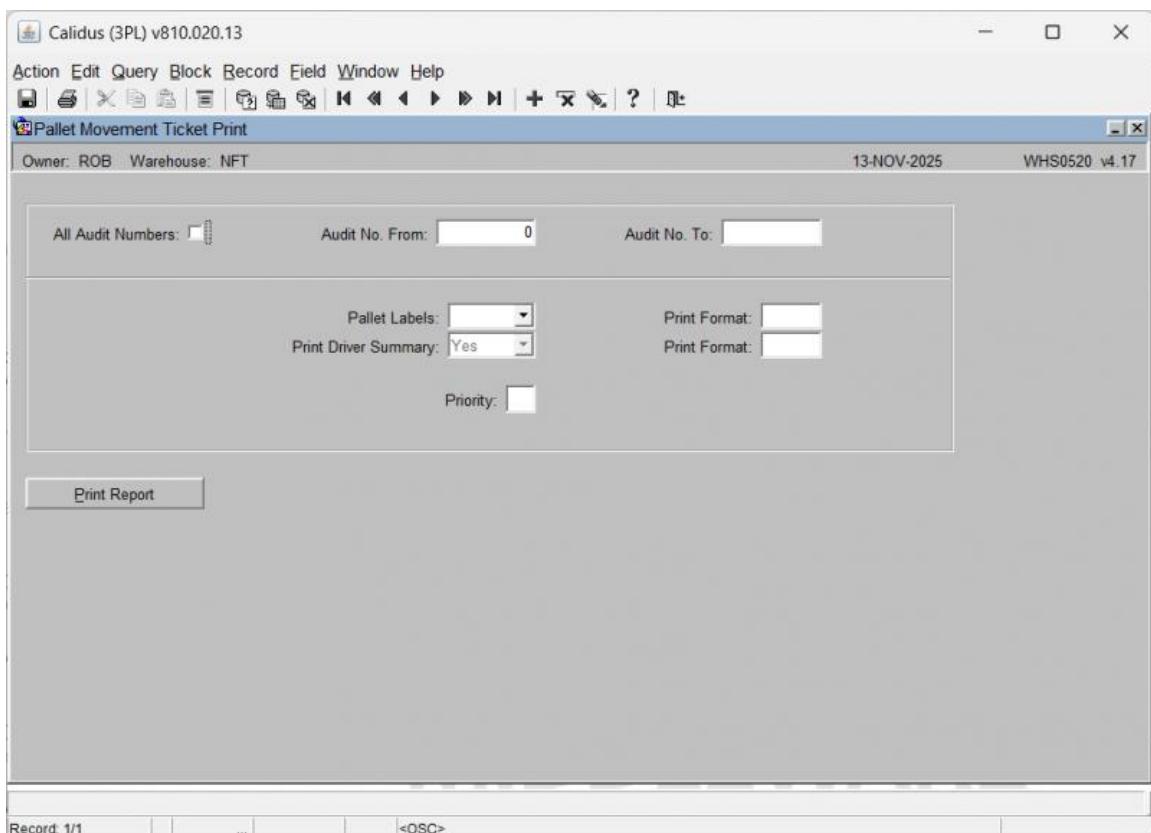

- **Confirm:** Confirms the pallet movement request details.

1 WHS0520 Pallet Movement Ticket Print

This is the *Pallet Movement Ticket Print* screen (WHS0520).

The following fields document the report and print parameters:

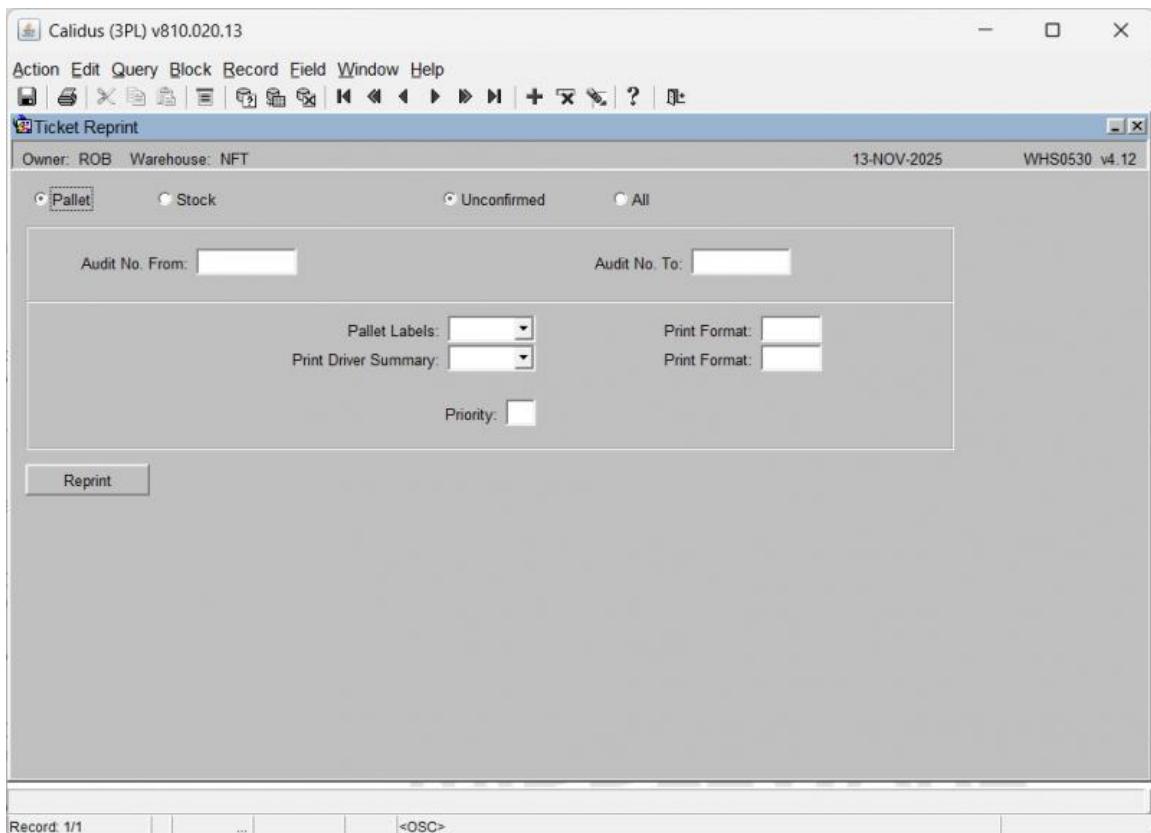

Field Name	Description
All Audit Numbers	Checkbox to include all available audit numbers in the print job.
Audit No From	The starting audit number for the report range.
Audit No To	The ending audit number for the report range.
Pallet Labels	Dropdown selection to specify the type of pallet labels to print.
Print Driver Summary	Checkbox or dropdown selection to include a summary from the print driver (Defaulted to Yes).
Print Format	Text field to define the specific print format.
Priority	Numerical field to assign a priority level to the print job.
Action Buttons:	

- **Print Report:** Executes the printing of the Pallet Movement Tickets and/or Report.

2 WHS0530 Ticket Reprint

This is the *Ticket Reprint* screen (WHS0530).

The following fields document the report and print parameters:

Field Name	Description
<i>Pallet</i>	Radio button selection to filter the reprint by Pallet ID.
<i>Stock</i>	Radio button selection to filter the reprint by Stock Code.
<i>Unconfirmed</i>	Radio button selection to filter only unconfirmed tickets.
<i>All</i>	Radio button selection to include all ticket statuses.
<i>Audit No From</i>	The starting audit number for the report range.
<i>Audit No To</i>	The ending audit number for the report range.
<i>Pallet Labels</i>	Dropdown selection to specify the type of pallet labels to print.
<i>Print Driver Summary</i>	Dropdown selection to include a summary from the print driver.
<i>Print Format</i>	Text field to define the specific print format.
<i>Priority</i>	Numerical field to assign a priority level to the print job.
Action Buttons:	

- **Reprint:** Executes the printing of the selected tickets.

3 WHS0540 Pallet Movement Confirmation

This is the *Pallet Movement Confirmation* screen (WHS0540).

The screenshot shows the Calidus (3PL) v810.020.13 software interface for the Pallet Movement Confirmation screen (WHS0540). The window title is "Pallet Movement Confirmation". The header contains fields for "Owner: ROB", "Warehouse: NFT", "Date: 13-NOV-2025", and "Version: WHS0540 v4.24". Below the header, movement header details are displayed: "Audit No: 25", "Driver: 001 Employee 001", "Checker: 002 Employee 002", "Move Date: 19-JUL-2006", and "Time: 10:01". The main area is a data grid for movement lines, with the first line showing "Line: 1", "Stock: DAVES9", "Description: Daves Stock Code", "Move Quantity: 10/", "Location From / To: A0080 / A0081", and "Pallet: 3336". Below the grid are several action buttons: "Line Confirm", "Confirm", "Check Digits", "Pallet Exchange", "Invoice Charges", and "View Log". At the bottom, a status bar shows "Record: 1/1" and "<OSC>".

The following fields display the movement header details:

Field Name **Description**

<i>Audit No</i>	The unique audit number for the movement request.
<i>Driver</i>	The code for the driver performing the move (Display only).
<i>Checker</i>	The code for the checker confirming the move (Display only).
<i>Move Date</i>	The date the movement was requested/executed (Display only).
<i>Time</i>	The time the movement was executed (Display only).

The following data columns are displayed in the movement confirmation grid:

Column Name	Description
<i>Line</i>	The sequential line number for the movement request.
<i>Stock</i>	The unique stock code being moved (Display only).
<i>Description</i>	A brief text description of the stock item (Display only).
<i>Move Quantity</i>	The quantity of stock being moved (Display only).
<i>Location From / To</i>	The source and destination location codes for the move.
<i>C / D</i>	Column to accept a check digit input for location confirmation.
<i>Cust Pallet Id From / To</i>	The customer's pallet ID for the source and destination (Display only).
<i>Pallet</i>	The system pallet ID (Display only).

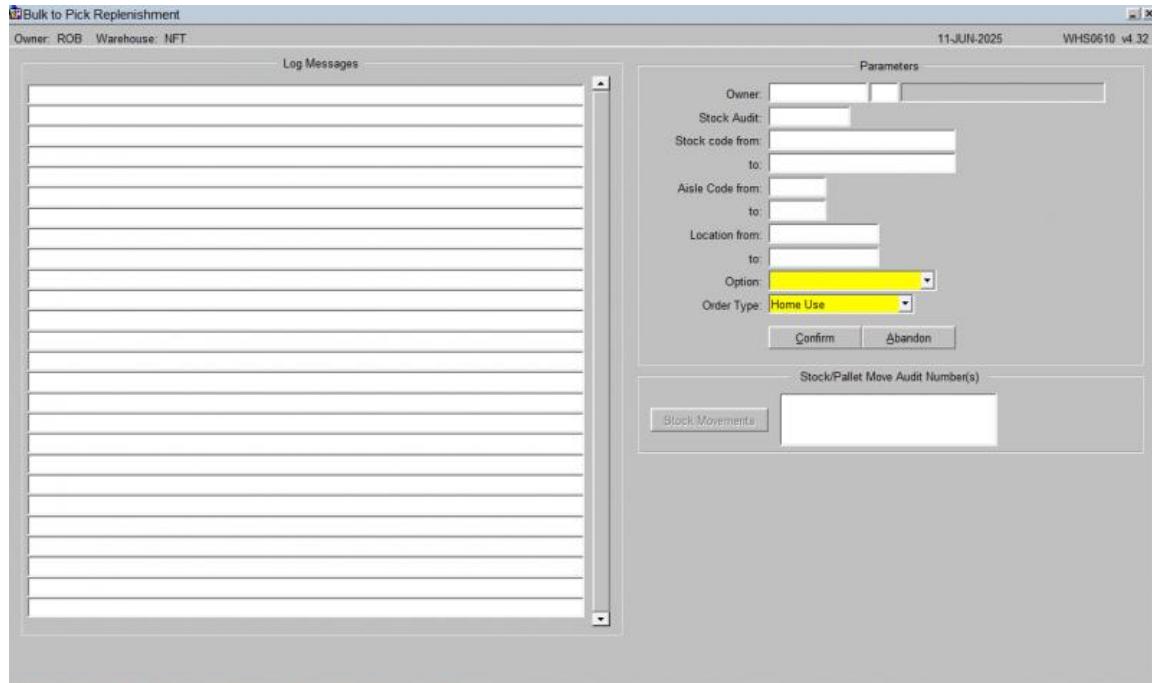

Action Buttons:

- Line Confirm:** Confirms the details of the selected movement line.
- Confirm:** Confirms all details for the entire pallet movement request.
- Check Digits:** Validates the entered check digits against the system.
- Pallet Exchange:** Initiates a pallet exchange operation.
- Invoice Charges:** Opens a screen for invoicing charges related to the movement.
- View Log:** Displays a log of actions taken on the movement.

4 WHS0610 Bulk to Pick Replenishment

The manual bulk to pick replenishment screen is used to fill up pick faces to their maximum. Usually this is prior to a picking run.

To use this, enter the parameters on the screen to identify the pick faces to be replenished. You can select using the following:

- Owner - to just replenish stock codes for a specific owner.
- Stock Code (range)- to just replenish stock codes for a range of stock codes or a specific stock code.
- Aisle Code (range) - to just replenish stock codes for specific aisles.
- Location (range) - to just replenish stock codes for specific locations.
- Order type (required) - a drop-down list is provided of all order types. Only one may be selected.

You are also required to select an option for the replenishments being generated: A drop-down-list is provided of the options

- Replenish Case Pick
- Replenish Layer Pick
- Replenish Case Replenishment
- Replenish Layer Replenishment

Once the parameters have been selected, you can press the **Confirm** button to find and generate all of the required replenishments, or click **Abandon** if this is not what you wanted to do.

When you click the **Confirm** button, the system will check the pick face level of the required stock codes and, if applicable, a replenishment movement will be generated.

The Log Messages section will show the actions that were taken and the stock codes and locations assessed.

The Stock/Pallet move audit numbers section will show all generated will display all the information for the generated replenishment movements. You can click the Stock Movements button to be taken to this audit number in the Stock Movements screen, so you can start to action it. This will take you to the [Stock Movement Screen WHS0700](#).

5 WHS0700 Stock Movement Screen

5.1 INTRODUCTION

This document describes the screens that are required to perform a Pallet or Stock Movement on the WMS.

This is a generic guide based on the version of the SCE system at the time of writing.

Note that fields marked ?**? are mandatory and are needed to ensure correct use of the system.

5.2 STOCK MOVEMENTS - WHS0700

A manual pallet or stock movement consists of 3 stages, which all must be completed within the same screen:

- Request
- Driver Ticket Print
- Confirmation

The request can be generated in a number of ways dependent on functionality being used within the warehouse. They include: -

- Manual request
- Request generated via RF
- Manual Bulk to Pick Replenishment
- Replenishment from allocation

Owner Code	Pallet ID	Stock Code	Description	From Location	To Location	Text Rotation No	Cust Rotation No

Field Name	Description	Options
Pallet / Stock	To select whether the movement is a full pallet movement or a stock movement	Pallet or Stock Movement
Audit Number	Unique audit number	System Generated if in entry mode, if running the screen for a enquiry an audit number can be entered directly or selected from a LOV
Status	Current status of the movement header	Status of the movement, Requested, Accepted, Printed or Confirmed
Driver	Warehouse code of the person who has moved the stock	Can entered directly if known or selected from a LOV
Checker	Warehouse code of the person who has checked the stock or pallet movement	Can entered directly if known or selected from a LOV
Date/Time	The system date and time upon confirmation of the movement audit	Will default in current system date and time
Buttons	Description	Options
Serial Numbers	Calls the serial number entry screen if valid	
Confirm	To update the status	
Print	To call the Print options for the movement	To print Pallet Labels and Movement notes
View Log	To call the log file upon confirmation of the audit	
Multiple Print	To allow the user to print documentation for multiple audits	
Field Name	Description	Options
Owner Code	The owner code of the stock being moved, the field will not be displayed if Owner Prompt is disabled	LOV of valid owner codes
Pallet id	The pallet identifier that is to be moved or have stock moved from it	Can entered directly if known or selected from a LOV
Stock Code	The stock code that the pallet id belongs to	Can entered directly if known or selected from a LOV
Description	Description of the stock code	System populated
From Location	The current location of the stock within the warehouse	System populated
To Location	The location the stock is to be moved to, only valid locations can be selected. i.e. validation will take place to ensure that the locations settings will allow for the pallet to moved	Can entered directly if known or selected from a LOV
Text Option Box	Option to capture audit text if relevant or required. Can be displayed in Oracle Data Extract reports or within WMS enquiries	
Rotation	Display field showing the system rotation of the pallet if populated	System populated
Customer Rotation	Display field showing the system rotation of the pallet if populated	System populated
Buttons	Description	Options
Line Confirm	To confirm individual audit lines	
Pallet Exchange	Enables the pallet exchange functionality if parameters have been enabled	If applicable will allow a pallet exchange, a list of valid pallets can be called in a LOV

5.2.1 Pallet Movement Request

Status is showing as requested as details are still being entered.

If a specific instruction or detail is required and if the *Text* box is ticked, a sub-screen will appear which will allow you to type up to 3 lines of instructions, each line up to 40 characters long. The first line of these instructions can be retrieved in Stock Movement Enquiry at Pallet level or from the Oracle Data Extract. If no instructions are required, just leave the *Text* box empty and move onto the next line if required.

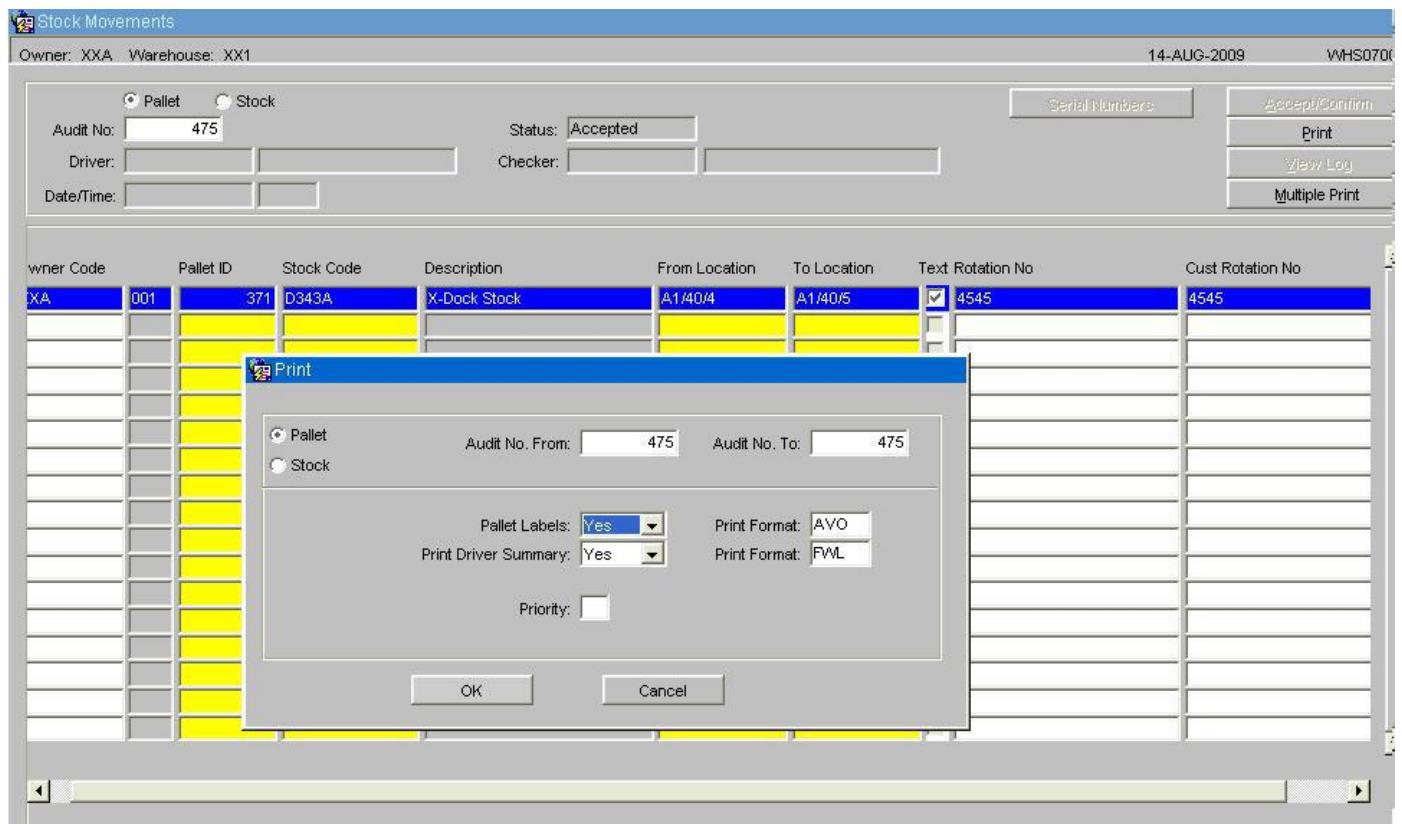

5.2.2 Pallet Movement Print

Once the line details have been entered, select the **Accept/Confirm** button - the status of the audit number will be updated to ?Print?.

The movement transaction will now be displayed in the standard enquiry screens for the pallet being moved.

Select the **Print** option and the Print option dialogue box will be shown.

Field Name	Description	Options
Pallet/Stock	Defaulted in by the system dependent on the type of movement	
Audit No From:	Defaulted in by the system	
Audit No To:	Defaulted in by the system	
Pallet Labels:	Whether pallet labels are required for the movement	Yes/No
Print Format:	Default label format	Will be decided during implementation
Print Driver Summary:	Whether a Movement document is required	Yes/No
Print Format:	Default print format	Will be decided during implementation
Priority	Priority the task is to be sent to the WCS (RF application)	2 through to 9
Buttons	Description	Options
OK	To confirm the settings and to print the required documentation	
Cancel	To cancel the print option

							Moved for re-palletising	

Driver _____ Date Of Move _____
 Checker _____ Time Of Move _____
 Comments _____

End of Report WHR0520

Example of the standard pallet label (Size A4):

XXA Standard Client (3pl)**Stock Code: D343A****X-Dock Stock****Plt ID: 371****Rot No: 4545**

Rcd: 13-AUG-09 S/D: 12-DEC-09

Qty: 120/ 0 Owner Rot:4545

Owner Plt: 58**GRN No: 81**

5.2.3 Pallet Movement Re Print

If required, it is possible to reprint the driver ticket. However, this can only be done prior to the pallet move confirmation.

Enter the audit number range, and click the **Reprint** button.

5.2.4 Pallet Movement Confirmation

Once the pallet movement has been completed physically, it is necessary to confirm the movement on the system.

The relevant audit number should be found, and the lines confirmed: this may be done individually using **Line Confirm** or all at the same time using **Confirm**.

For the confirmation process to run, the following fields must have been populated: -

- Driver
- Checker
- Date/Time
- Check Digits (If required)

5.2.5 Stock Movement Request

A stock movement consists of 3 stages, which all must be completed. This allows the entry of quantity movements instead of an entire pallet.

If the stock to be moved is serial number controlled, you must enter the relevant serials before the status will be updated - see [Medical/Serial Numbers](#) for more information.

The screenshot shows a software interface for managing warehouse movements. At the top, there are fields for 'Owner: XXA' and 'Warehouse: XX1', and a date '17-AUG-2009'. On the right, there are buttons for 'Accept/Confirm', 'Print', 'View Log', and 'Multiple Print'. Below these are fields for 'Audit No.' (477), 'Status' (Requested), 'Driver', 'Checker', and 'Date/Time'. A table lists movement details: Owner Code (XXA), Pallet ID (001), Stock Code (340), Description (Pallet Movement), From Location (A1/36/4), Cases (5), Units (15), To Location, Pallet Id To, and Text Rotation No (checkbox DFSDFSDF). A modal dialog box titled 'Storage Option' is displayed, containing the message: 'The moved stock will:' followed by five radio button options: 'Share an Existing Pallet - Same Stock' (selected), 'Share an Existing Pallet - mixed stock', 'Not be stored on a Pallet', 'Generate a pallet without suggesting a location', and 'Generate a pallet and suggest a location'. A 'Confirm' button is at the bottom of the dialog.

Field Name	Description	Options
Share an Existing Pallet - Same Stock	When selected the LOV within the ?To Location? field will show a list of available pallets for the same stock code for the quantity to be moved on to	
Share an Existing Pallet - Mixed Stock	When selected the LOV within the ?To Location? field will show a list of all pallets for the warehouse/owner	
Not be stored on a Pallet	Stock will be stored in a non-palletised location	
Generate a pallet without suggesting a location	Will generate a new pallet number for the moved stock but will not suggest a location, this must be manually entered	
Generate a pallet and suggest a location	Will generate a new pallet number for the moved stock and suggest an alternative location dependent on the stocks putaway algorithm	It is also possible to over ride the suggested location and manually enter another slot
Buttons	Description	Options
Confirm	Confirm selection	

5.2.6 Stock Movement Print

Once the line details have been entered, select the **Accept/Confirm** button - the status of the audit number will be updated to **?Print?**. The movement transaction will now be displayed in the standard enquiry screens for the pallet being moved.

Select the **Print** option and the Print option dialogue box will be called.

5.2.8 Stock Movement Confirmation

Once the pallet movement has been completed physically, it is necessary to confirm the movement on the system. The relevant audit number should be found, and the lines confirmed: this may be done individually using **Line Confirm** or all at the same time using **Confirm**.

For the confirmation process to run, the following fields must have been populated: -

- *Driver*
- *Checker*
- *Date/Time*
- *Check Digits (If required)*

5.2.9 Stock Move Request - Held Stock

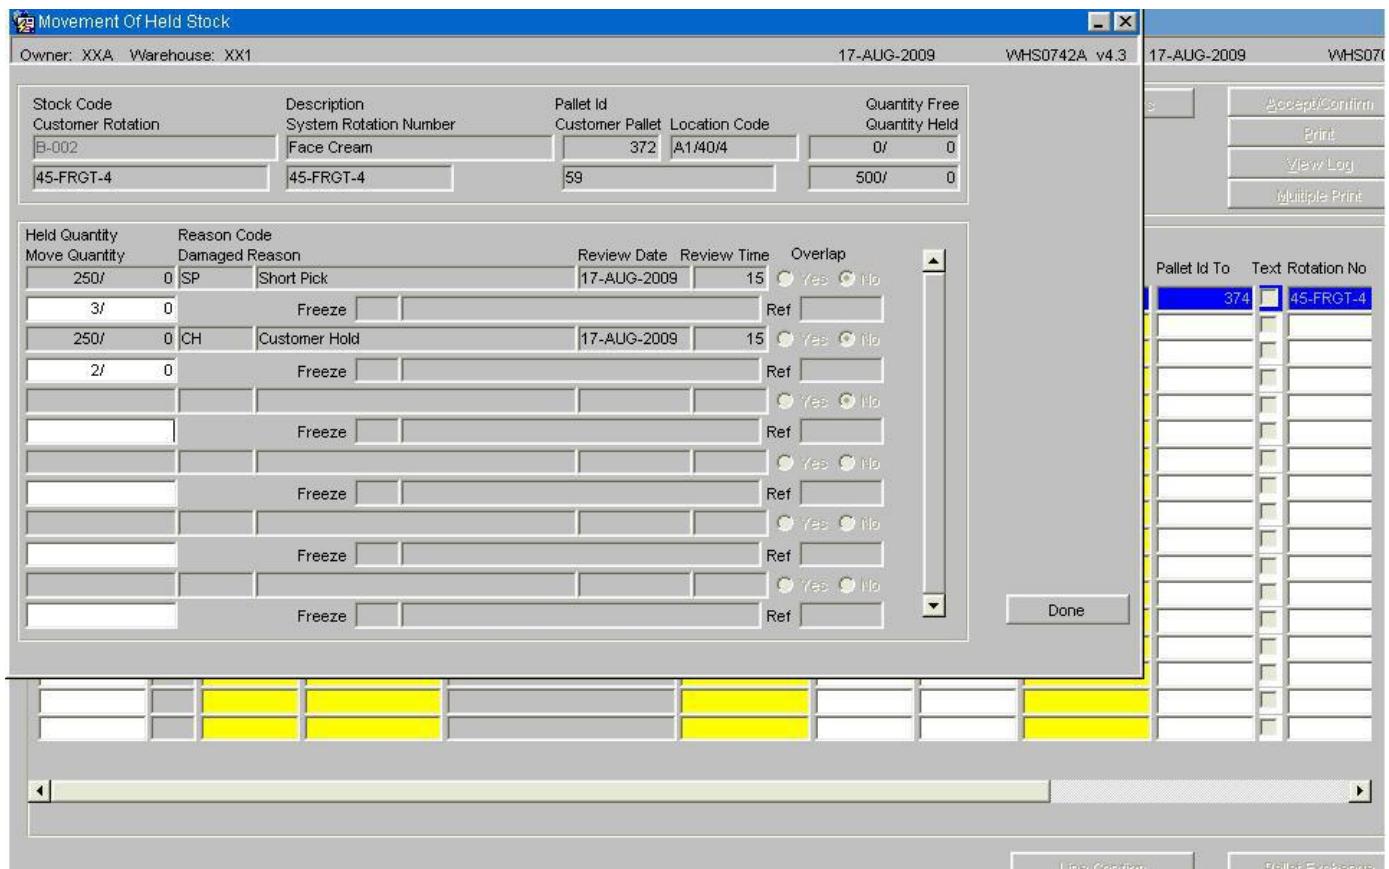

If the pallet or any part of the pallet is on hold then the system will notify the user.

5.2.10 Movement of Held Stock Screen

For a pallet with multiple hold codes or a mixture of free stock and held, then upon completion of the individual line a sub screen (WHS0742A) will be called that will allow the user to specify the quantity of stock to be moved against a particular hold reason code.

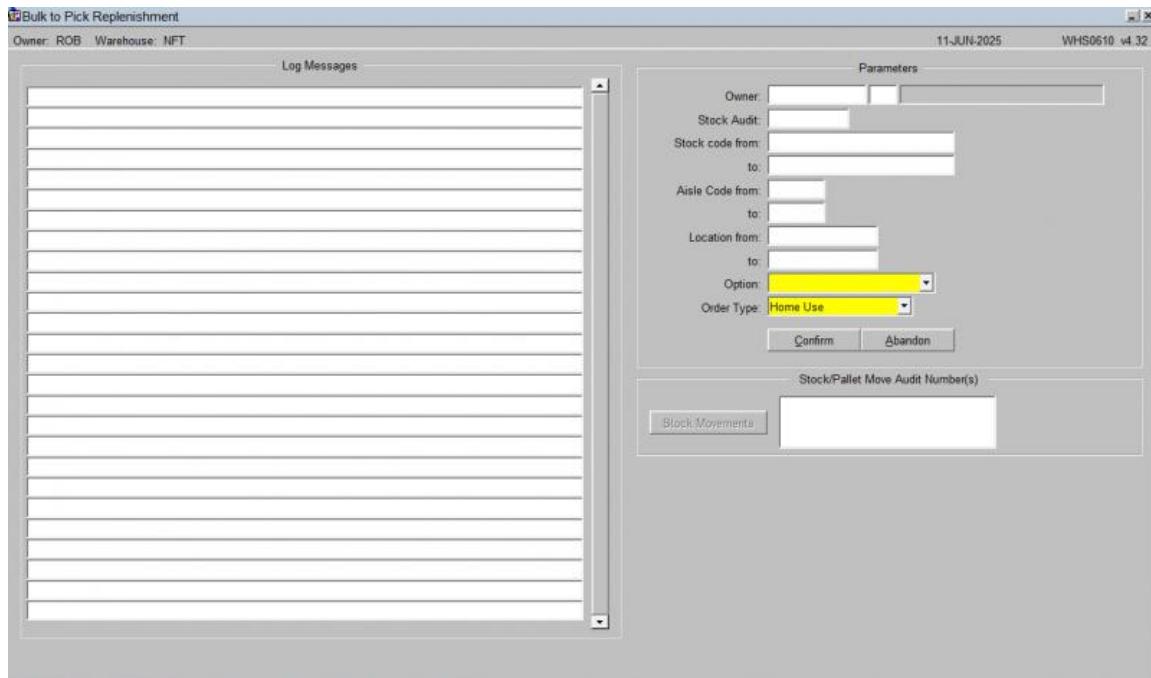

Upon completion of entering the move quantity details then select the **Done** button and complete the movement as for a standard stock movement.

5.3 BULK TO PICK REPLENISHMENT

The manual bulk to pick replenishment screen is used to fill up pick faces to their maximum. Usually this is prior to a picking run.

To use this, enter the parameters on the screen to identify the pick faces to be replenished. You can select using the following:

- Owner - to just replenish stock codes for a specific owner.
- Stock Code (range)- to just replenish stock codes for a range of stock codes or a specific stock code.
- Aisle Code (range) - to just replenish stock codes for specific aisles.
- Location (range) - to just replenish stock codes for specific locations.
- Order type (required) - a drop-down list is provided of all order types. Only one may be selected.

You are also required to select an option for the replenishments being generated: A drop-down-list is provided of the options

- Replenish Case Pick
- Replenish Layer Pick
- Replenish Case Replenishment
- Replenish Layer Replenishment

Once the parameters have been selected, you can press the **Confirm** button to find and generate all of the required replenishments, or click **Abandon** if this is not what you wanted to do.

When you click the **Confirm** button, the system will check the pick face level of the required stock codes and, if applicable, a replenishment movement will be generated.

The Log Messages section will show the actions that were taken and the stock codes and locations assessed.

The Stock/Pallet move audit numbers section will show all generated will display all the information for the generated replenishment movements. You can click the Stock Movements button to be taken to this audit number in the Stock Movements screen, so you can start to action it. This will take you to the [Stock Movement Screen WHS0700](#).

6 WHS0700 Stock Movements

The Stock Movements Request screen is used to move stock around within the warehouse.

The Stock Movements Request screen is located in the Stock Movements folder.

The following document covers how to move full and part pallets. Part pallets are referred to as ?Stock Movements?.

Driver _____ Date Of Move _____

Checker _____ Time Of Move _____

Comments _____

End of Report WHR0520

There are 3 fields that need to be completed before the movement can be confirmed.

Driver - An employee code must be entered. The list of values can be used to display all valid employees.

Checker - An employee code must be entered. The list of values can be used to display all valid employees.

Date/Time - A date and time can be manually entered or if you tab across the field, the system will default to today's date and time.

Once all the data has been entered, press the ?Confirm? button to complete the movement (see screen shot below).

Stock Movement

Click in the ?Stock? radio button (see screen shot below).

Press the ?Cancel Query? button.

An audit number has now been produced (see screen shot above).

The screen is very similar to the pallet movement option, however, here you can specify the number of cases or units to move.

The Owner Code field will be automatically filled with the default owner set up for the user.

Stock Code - Enter the stock code you wish to move. Alternatively, use the list of values to select from.

Pallet ID - Enter the pallet ID that you wish to move.

From Location - This will be populated automatically with the location that the pallet is currently stored in.

Cases - Enter the number of cases that you wish to move.

Units - Enter the number of units that you wish to move.

To Location - If auto-putaway is switched on, the system

and you can select your own by either manually typing it in, or by using the list of values.

When you click in the ?To Location? field a pop-up box will be displayed. You need to choose one of the options:

The moved stock will:

- Share an Existing Pallet - Same Stock
- Share an Existing Pallet - mixed stock
- Not be stored on a Pallet
- Generate a pallet without suggesting a location
- Generate a pallet and suggest a location

Confirm

In this instance we will use an existing pallet that already contains the same stock. Click the ?Confirm? button when you have selected your choice.

The **Pallet Id To** field will be automatically populated with the pallet id that is currently stored in the location you selected.

Press the Accept/Confirm button when have entered the required data (see above screen shot).
>

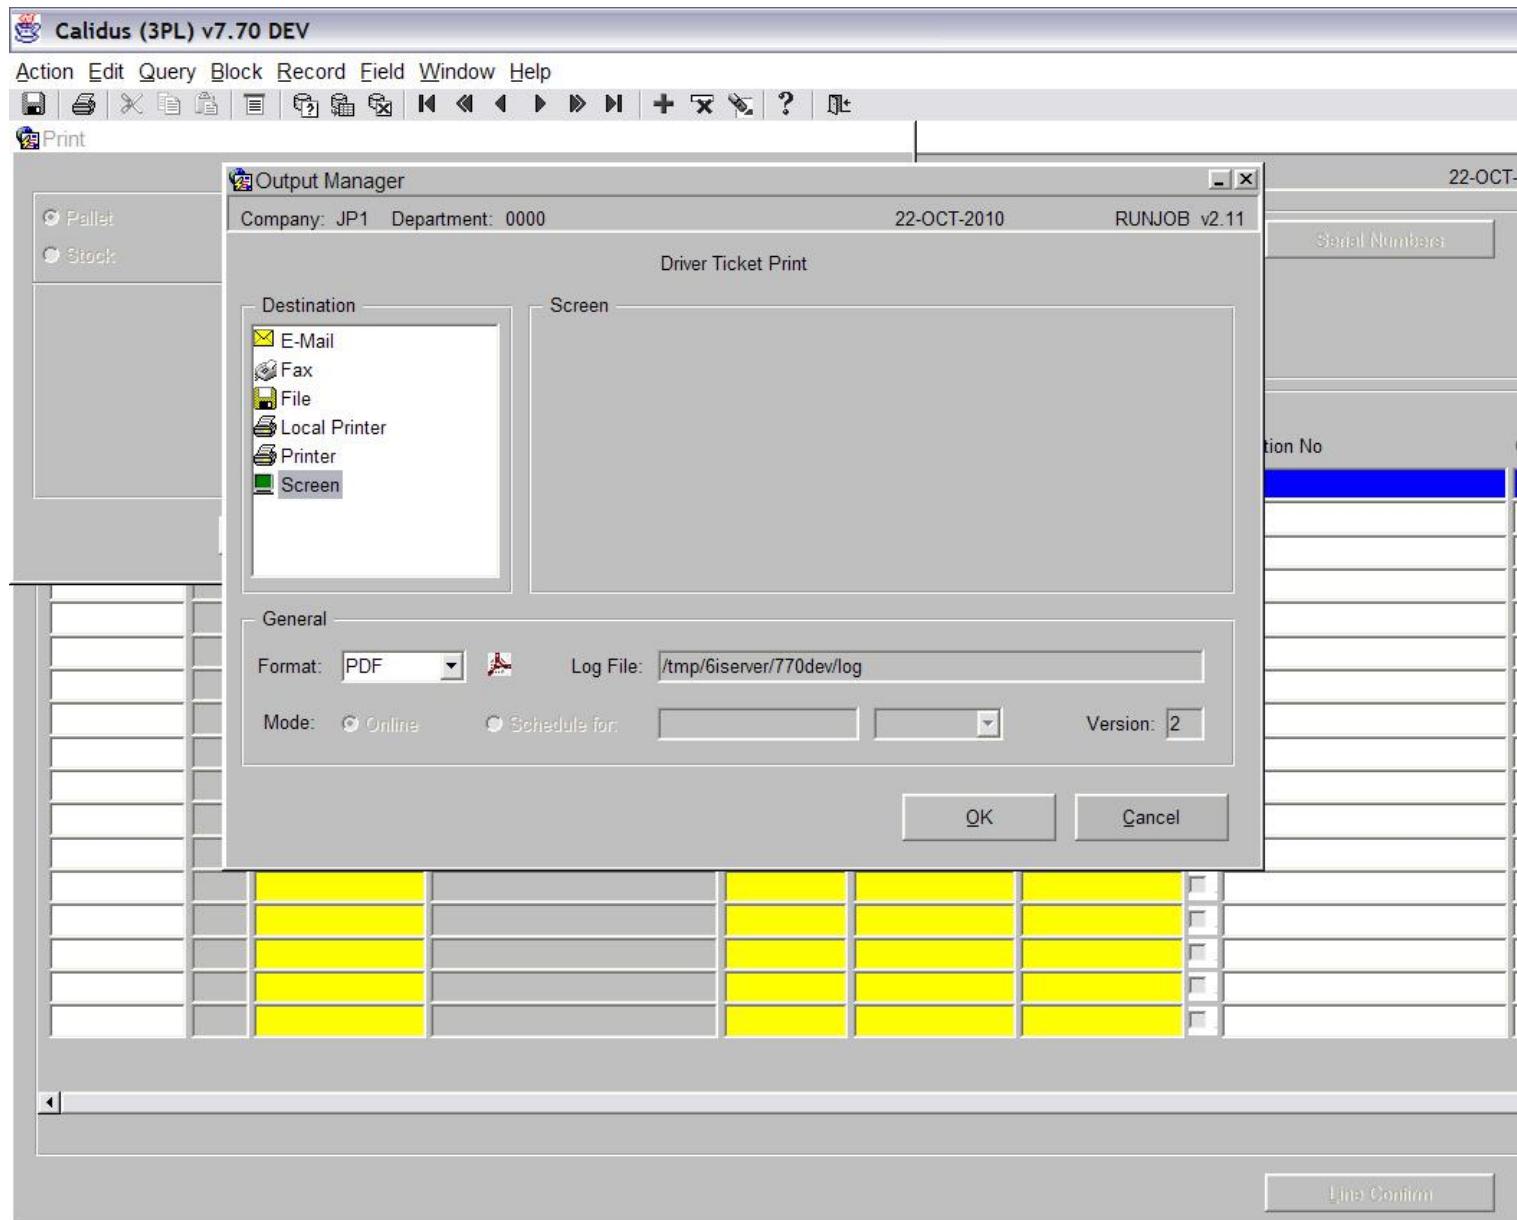

A pop up box will now be displayed.

The screenshot shows the Calidus (3PL) v7.70 DEV software interface. The menu bar includes Action, Edit, Query, Block, Record, Field, Window, and Help. The toolbar contains icons for file operations like Open, Save, Print, and various selection and navigation tools. A 'Print' button is visible on the toolbar. The main window displays a 'Print' dialog box. The dialog box has two radio buttons: 'Pallet' (selected) and 'Stock'. It includes fields for 'Audit No. From:' (632) and 'Audit No. To:' (632). Below these are two sets of dropdown menus: 'Pallet Labels:' (Yes) and 'Print Format:' (BHS). There are also dropdowns for 'Print Driver Summary:' (Yes) and 'Print Format:' (FWL). A 'Priority:' field with a dropdown arrow is also present. At the bottom are 'OK' and 'Cancel' buttons.

You can change whether you wish Pallet Labels and a Driver Summary along with the formats of the prints.

The output manager box will now be displayed. Press the screen icon and then click the OK button.

The movement report will now print.
