1.1 Selection Tab.....1

1 LAS0312 Pick Wave Control

The pick wave maintenance screen allows the user to ?group? orders together as a route load. The various selection criteria you see here (Order status, order priority, product type etc) are mandatory determined by whether the owner rules - PW01-PW13 are set.

1.1 Selection Tab

Field Name	Description	Options
<i>Route/Load or Order Number</i>	A selection of whether to find routes/loads/orders and in what way. By selecting Route/orders, you can create new loads from this screen.	Select from the DDL provided - <i>Route/Load or Order Number</i>
<i>Route **</i>	The route code the orders will be assigned to.	The route code must exist in route codes maintenance. This is always required, even when entering by Order Number. An LOV is available.
<i>Load Date</i>	The date of the load that was generated	Only enabled when selecting by <i>Route/Load</i> .
<i>Load Status</i>	The status of the load generated	Select from the DDL provided: <i>All, Despatched, Open, Being Picked, Pick Confirmed</i> . Only enabled when selecting by <i>Route/Load</i> .
<i>Load</i>	The unique load number	If one is not entered, a new load will be generated. The load number will be automatically generated once orders have been assigned to the route. If selected, then an LOV is available to select any existing load numbers.
<i>TMS Trip ID</i>	If CTMS is being used, then the TMS trip ID can be provided here instead of the load number.	Only enabled when selecting by <i>Route/Load</i> .
<i>Owner **</i>	The owner code of the orders	Must exist in owner maintenance - if owner prompt maintenance default is set to ?N? you may use any owner set up against your login id

Field Name	Description	Options
replenishments		
Buttons	Description	Options
Find	This button starts the process of finding the orders based on the selection criteria entered	-

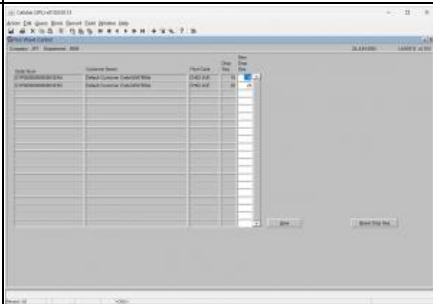

Once found, the loads and orders matching the selection criteria are displayed in the *Details* tab.

1.1.1 Details Tab

Note: By clicking on the buttons above the columns it is possible to re-sort the data to improve the order display and to aid with selection.

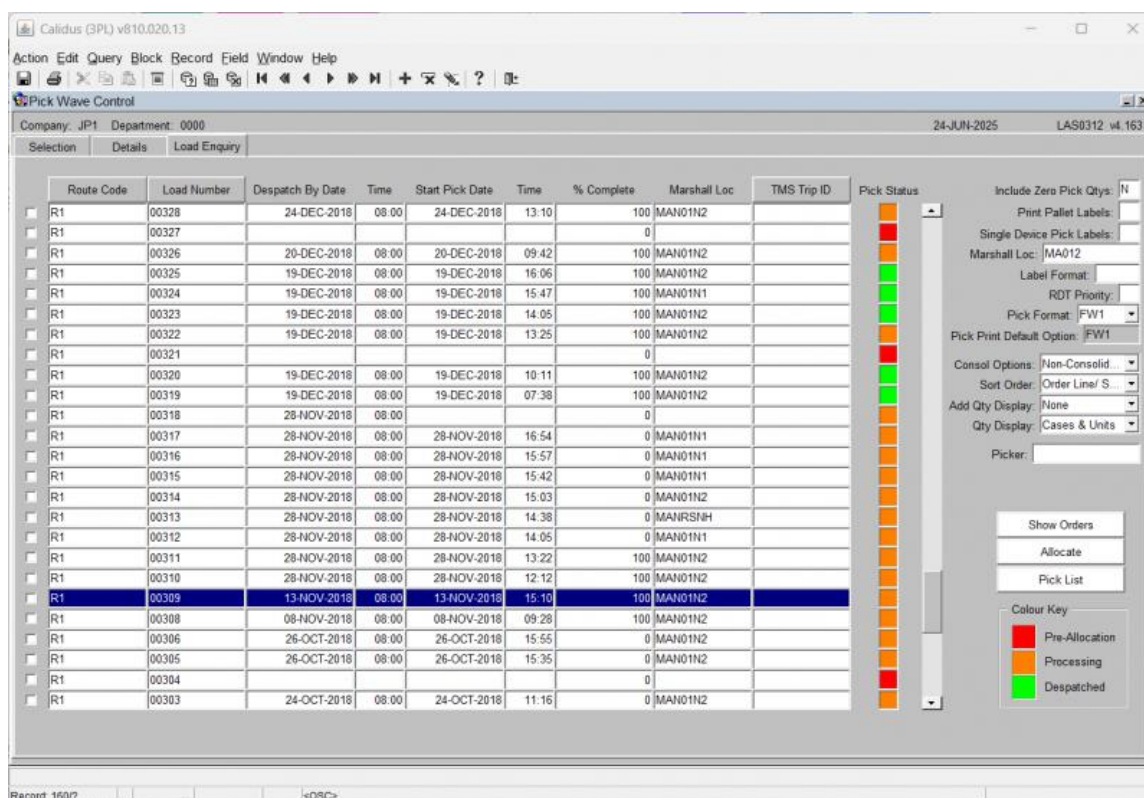

Display Values	Description	Options
Assigned/maximum totals	This field will display how many order lines have been assigned so far out of the maximum allowed	Display only, the maximum orders and order line levels are set in Owner Maintenance, Sales Order Tab
Orders	The total number of orders allowed for a route load	Display only
Ord Lines	The total number of order lines for that order	Display only
Buttons	Description	Options
Configure	To allow the screen to be configured to a specific operation or user	This will display the Program Layout Configuration screen WHS0909 , where you can select the columns displayed in this form.
Reset Sort	Will reset the sort sequence to the values that were originally returned	
Refresh Data	Requery the orders and loads again using the existing criteria entered in the <i>Selection</i> tab.	
Assign All	Allows the user to assign all orders selected to the route load	
Deassign All	Allows the user to de-assign all orders selected from the route load	

Buttons	Description	Options
Assign Number	Will create a Pick Wave with the number of orders entered in the Assign Number field	
Batch	Will create multiple Pick Waves, each pick wave will have the number of orders entered in the Assign Number field	If there are a 100 orders displayed from the original selection criteria, if you then enter 10 into the Assign Number field and select Assign Batch, then ten Pick Waves will be created each with 10 orders.
Drop Seq	Allows you to modify the drop sequence within the selected load. A new window will open showing the orders in the load, which may then be modified through the entry of the new sequence column. You can then save your changes with the Save button, or reset to the pre-existing sequence. Saving will return you to the <i>Details</i> tab.	
Add to Existing	Allows the user to move orders to existing route loads as long as the status matches	-
Send to Allocation	Enables the user to allocate the orders selected	This option will only be enabled if the orders selected are at status ?1?
Split	Split selected orders from an existing load.
