1 Quick Pick Wave Maintenance

1.1 Goods Out - Pick Wave Maintenance

The Pick Wave Maintenance screen is used to group together multiple sales orders, place them on routes/loads and release for allocation and picking.

The Pick wave Maintenance screen can be found in the Sales Allocation and Picking folder.

The following section covers how to create a pick wave containing multiple orders. This is split into 3 sections, Route/Load creation, Allocation and Pick List.

Route/Load Creation

Note: Even though the screen is not light blue, it is actually in ?Query Mode?.

The following data should be entered:

Route Code - These are Route Codes that have previously been set up. Use the list of values icon to bring up a list of available route codes.

Load Number - This will be created later.

Owner - Press tab and all owners will be the default. Alternatively you can enter a specific owner.

Order Status - Orders that are waiting to be placed on a pick wave will be at status 1 (committed). Enter 1.

Pick Wave Maintenance

Company: JP1 Department: 0000

Selection Details

Route Code:	DEF-001	Load Number:	
Owner:	ALL	ALL	
Order Status:	1		
Order Priority:			
Product Type:			
Depot Code:			
Order No. From:		To:	
Area Code:			
Shipment Id:			
Customer Ref:			
Address Line:			
Carrier Code:			
Routing Code:			
Request Type:			
End Delivery Date:			

Lines : No filter

To retrieve all orders that are at status 1, press the ?Find? button (see screen shot above).

You can select the order you wish to place on the route either by pressing the **Assign All?** button, or by clicking in the check box if you only want to select specific orders (see screen shot below). **<hr>**

In this example we are going to pickwave 2 orders (see screen shot below).

Press the save button to create a load number.

Note: Now that the route is created, it is possible for the user to leave the screen and find the route at a later time when it is needed.

Send To Pick-up

Once the Route/Load has been allocated, the orders will now show at status 4 and the orders will be ready for sending to pick (see screen shot below).

You will notice that the **Send to Alloc?** button has now changed to **Send to Pick?** (see screen shot above).

Press the ?Send to Pick? button to produce the picking list

Click the **Yes** button when prompted whether you wish to pick all the orders on the pick wave.

Send to Pick Parameters.	
Include Zero Pick Qty's Y/N?	<input type="checkbox"/>
Print Pallet Labels Y/N?	<input checked="" type="checkbox"/>
Single Device for Picking Labels Y/N?	<input checked="" type="checkbox"/>
Marshalling Location	MA/99/9
Label Format:	<input type="text"/>
RDT Priority:	2
Pick Format :	FWP
	Option
<input type="button" value="Cancel"/>	<input type="button" value="Generate Pick List"/>

The following details can be entered:

Include Zero Pick Qty's - If some items are out of stock, by selecting ?Y?, these will be displayed on the pick list. If this is left blank or ?N?, then shorted lines will not be printed.

Marshalling Location - If there are multiple marshalling lanes available you can select the marshalling lane that you require by using the list of values icon. Press the ?Generate Pick List? to bring up the Output Manager.

Press the screen button in the Output Manager Box (see screen shot below)

Press OK to produce the picking list.
