# 1 STKPRCC01A

Product Range, Class, Category and Group combinations are created in order to segregate stock within the warehouse. They can also be used to distinguish one type of product from another. You can use these combinations to specify putaway routines and for stocktaking purposes. Note, although you see all four here, when you set them up you have to create the range first, go through the rest of the fields and save the record. When you come to create the class field, you have to enter the range you just created and then go through the same process. In this way, you can have multiple combinations of all four criteria.

Field Name	Description	Options	Generic Values
<i>Prod Range **</i>	Used to denote a specific range for multiple products in conjunction with class, category and group	1 character free text field	Defined by the client
<i>Prod Class **</i>	Used to denote a specific class for multiple products in conjunction with range, category and group	2 character free text field	Defined by the client
