The creation of an area code is to enable the user to assign locations to a specific physical area within the warehouse. Note, bigger warehouse will have more clearly defined areas than that of a smaller operation.

These codes are used as part of the location identifier as well as in sorting pick lists, structuring stock take etc..

Code	Description
01	Area 1
MA	Marshalling area
QA	Quarantine Area

Note:

- The code specified must be within the area code length defined in system parameters main tab
- The description is used to enable the user to clearly see where the area is within the warehouse
