1 WHS0085

This screen does not have to be set up.

However, during various processes, the system dictates its own hard-coded reason codes.
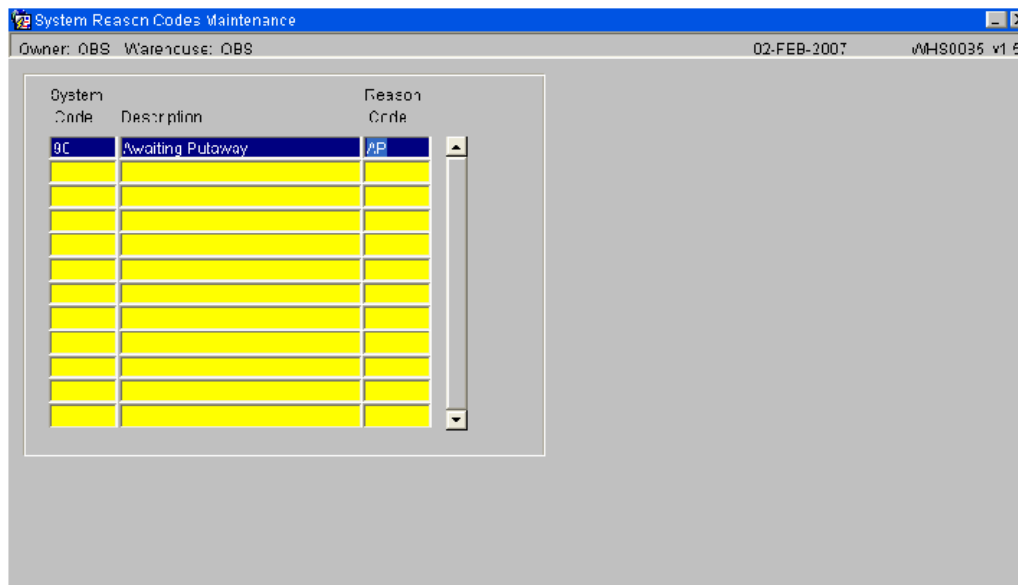

As there is no table to specify what these codes mean, this table can be used to ?translate? a system generated reason code.

For example, after Receipt Confirmation has been completed, the system automatically puts stock on hold with a reason code of ?90?.

When querying the product, all the user will see is an unknown number.

?AP? is created in reason codes maintenance and assigned to System Code ?90?

For all future queries, the user will then see a more recognizable ?AP?.

Note:

- The System Code is the one generated by Calidus 3pl. For a full list, please see your representative from OBS.
- The Reason Code must have been previously set up in Reason Codes Maintenance.

Below is the current list of System Reason Codes from the time of writing, these will be added to as the system is developed.

Reason Code	Description
5M	RF Ad hoc stock move
6A	Allocation shortage
73	*Rework*
74	Allocation Hold Code
75	*EDI serial (approve/reject)*
