1 WHS0472 Putaway Re-Sequence Generation

By selecting the **Resequence** button the system will generate new putaway sequence numbers for each location. The sequencing starts at the first sorted location for that aisle and ends at the last location for the aisle, then re-starting at one for the next aisle until every location within the warehouse is given a sequence number.

 **Note:** Any previous sequence numbers will be over written, with the new sequence.
