# 1 WHS0700 Stock Movement Screen

## 1.1 INTRODUCTION

This document describes the screens that are required to perform a Pallet or Stock Movement on the WMS.

This is a generic guide based on the version of the SCE system at the time of writing.

Note that fields marked ?\*\*? are mandatory and are needed to ensure correct use of the system.

## 1.2 STOCK MOVEMENTS - WHS0700

A manual pallet or stock movement consists of 3 stages, which all must be completed within the same screen:

- Request
- Driver Ticket Print
- Confirmation

The request can be generated in a number of ways dependent on functionality being used within the warehouse. They include: -

- Manual request
- Request generated via RF
- Manual Bulk to Pick Replenishment
- Replenishment from allocation

Owner Code	Pallet ID	Stock Code	Description	From Location	To Location	Text Rotation No	Cust Rotation No

Field Name	Description	Options
Pallet / Stock	To select whether the movement is a full pallet movement or a stock movement	Pallet or Stock Movement
Audit Number	Unique audit number	System Generated if in entry mode, if running the screen for a enquiry an audit number can be entered directly or selected from a LOV
Status	Current status of the movement header	Status of the movement, Requested, Accepted, Printed or Confirmed
Driver	Warehouse code of the person who has moved the stock	Can entered directly if known or selected from a LOV
Checker	Warehouse code of the person who has checked the stock or pallet movement	Can entered directly if known or selected from a LOV
Date/Time	The system date and time upon confirmation of the movement audit	Will default in current system date and time
Buttons	Description	Options
Serial Numbers	Calls the serial number entry screen if valid	
Confirm	To update the status	
Print	To call the Print options for the movement	To print Pallet Labels and Movement notes
View Log	To call the log file upon confirmation of the audit	
Multiple Print	To allow the user to print documentation for multiple audits	
Field Name	Description	Options
Owner Code	The owner code of the stock being moved, the field will not be displayed if Owner Prompt is disabled	LOV of valid owner codes
Pallet id	The pallet identifier that is to be moved or have stock moved from it	Can entered directly if known or selected from a LOV
Stock Code	The stock code that the pallet id belongs to	Can entered directly if known or selected from a LOV
Description	Description of the stock code	System populated
From Location	The current location of the stock within the warehouse	System populated
To Location	The location the stock is to be moved to, only valid locations can be selected. i.e. validation will take place to ensure that the locations settings will allow for the pallet to moved	Can entered directly if known or selected from a LOV
Text Option Box	Option to capture audit text if relevant or required. Can be displayed in Oracle Data Extract reports or within WMS enquiries	
Rotation	Display field showing the system rotation of the pallet if populated	System populated
Customer Rotation	Display field showing the system rotation of the pallet if populated	System populated
Buttons	Description	Options
Line Confirm	To confirm individual audit lines	
Pallet Exchange	Enables the pallet exchange functionality if parameters have been enabled	If applicable will allow a pallet exchange, a list of valid pallets can be called in a LOV

## 1.2.1 Pallet Movement Request

Status is showing as requested as details are still being entered.

If a specific instruction or detail is required and if the *Text* box is ticked, a sub-screen will appear which will allow you to type up to 3 lines of instructions, each line up to 40 characters long. The first line of these instructions can be retrieved in Stock Movement Enquiry at Pallet level or from the Oracle Data Extract. If no instructions are required, just leave the *Text* box empty and move onto the next line if required.

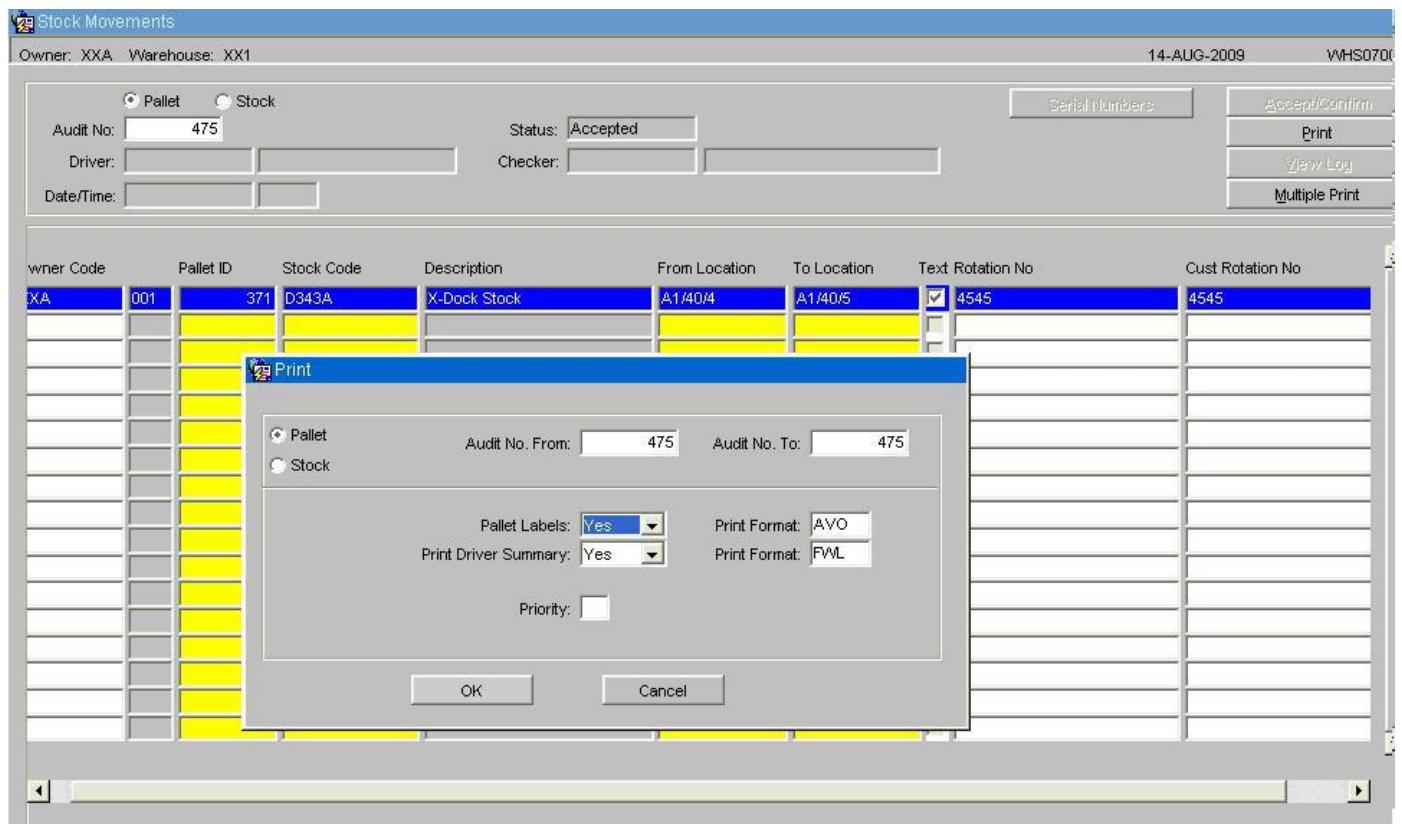

### 1.2.2 Pallet Movement Print

Once the line details have been entered, select the **Accept/Confirm** button - the status of the audit number will be updated to **Print**.

The movement transaction will now be displayed in the standard enquiry screens for the pallet being moved.

Select the **Print** option and the Print option dialogue box will be shown.

Field Name	Description	Options
Pallet/Stock	Defaulted in by the system dependent on the type of movement	
Audit No From:	Defaulted in by the system	
Audit No To:	Defaulted in by the system	
Pallet Labels:	Whether pallet labels are required for the movement	Yes/No
Print Format:	Default label format	Will be decided during implementation
Print Driver Summary:	Whether a Movement document is required	Yes/No
Print Format:	Default print format	Will be decided during implementation
Priority	Priority the task is to be sent to the WCS (RF application)	2 through to 9
Buttons	Description	Options
OK	To confirm the settings and to print the required documentation	
Cancel	To cancel the print option

End of Report WHR0520

Example of the standard pallet label (Size A4):

**XXA Standard Client (3pl)**

**Stock Code: D343A**

**X-Dock Stock**

**Plt ID: 371**

**Rot No: 4545**

**Rcd: 13-AUG-09 S/D: 12-DEC-09**

**Qty: 120/ 0 Owner Rot:4545**

**Owner Plt: 58**

**GRN No: 81**

### 1.2.3 Pallet Movement Re Print

If required, it is possible to reprint the driver ticket. However, this can only be done prior to the pallet move confirmation.

Enter the audit number range, and click the **Reprint** button.

#### 1.2.4 Pallet Movement Confirmation

Once the pallet movement has been completed physically, it is necessary to confirm the movement on the system.

The relevant audit number should be found, and the lines confirmed: this may be done individually using **Line Confirm** or all at the same time using **Confirm**.

For the confirmation process to run, the following fields must have been populated: -

- Driver
- Checker
- Date/Time
- Check Digits (If required)

### 1.2.5 Stock Movement Request

A stock movement consists of 3 stages, which all must be completed. This allows the entry of quantity movements instead of an entire pallet.

If the stock to be moved is serial number controlled, you must enter the relevant serials before the status will be updated - see [Medical/Serial Numbers](#) for more information.

The screenshot shows the WHS0700 Stock Movement Screen. At the top, there are fields for Owner: XXA, Warehouse: XX1, Date: 17-AUG-2009, and Screen: WHS0700. Below these are buttons for Pallet and Stock, Audit No: 477, Status: Requested, Driver: [empty], Checker: [empty], and Serial Numbers, Accept/Confirm, Print, View Log, and Multiple Print buttons. The main table has columns: Owner Code, Pallet ID, Stock Code, Description, From Location, Cases, Units, To Location, Pallet Id To, Text, Rotation No. A row in the table shows XXA, 001, 340, P-001, Pallet Movement, A1/36/4, 5, 15, and a checkbox for DFSDSFDF. A modal dialog box titled 'Storage Option' is displayed, containing the message: 'The moved stock will:' followed by five radio button options: 'Share an Existing Pallet - Same Stock' (selected), 'Share an Existing Pallet - mixed stock', 'Not be stored on a Pallet', 'Generate a pallet without suggesting a location', and 'Generate a pallet and suggest a location'. A 'Confirm' button is at the bottom of the dialog.

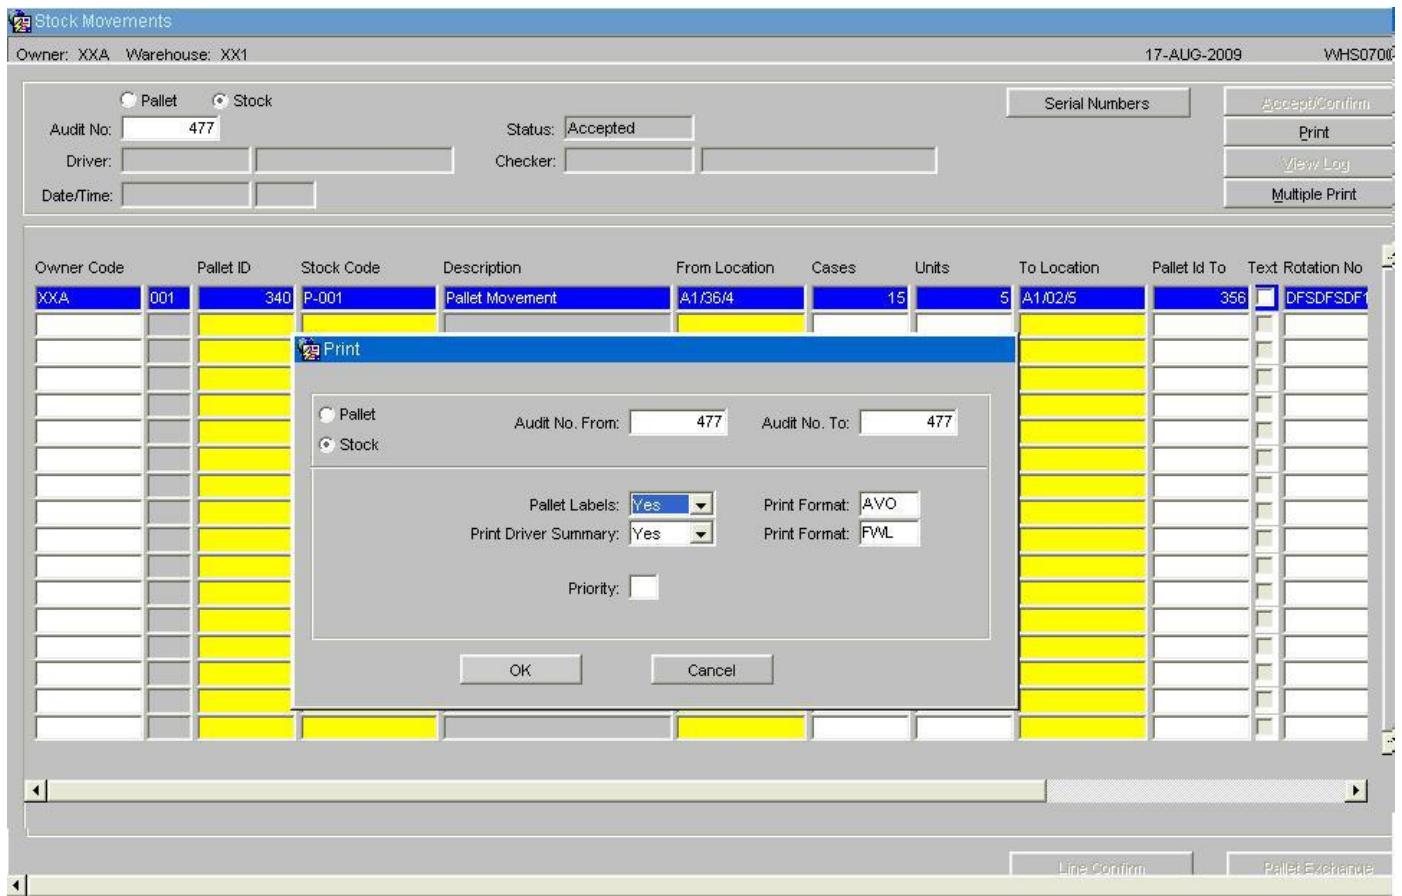

Field Name	Description	Options
Share an Existing Pallet - Same Stock	When selected the LOV within the ?To Location? field will show a list of available pallets for the same stock code for the quantity to be moved on to	
Share an Existing Pallet - Mixed Stock	When selected the LOV within the ?To Location? field will show a list of all pallets for the warehouse/owner	
Not be stored on a Pallet	Stock will be stored in a non-palletised location	
Generate a pallet without suggesting a location	Will generate a new pallet number for the moved stock but will not suggest a location, this must be manually entered	
Generate a pallet and suggest a location	Will generate a new pallet number for the moved stock and suggest an alternative location dependent on the stocks putaway algorithm	It is also possible to over ride the suggested location and manually enter another slot
Buttons	Description	Options
Confirm	Confirm selection	

## 1.2.6 Stock Movement Print

Once the line details have been entered, select the **Accept/Confirm** button - the status of the audit number will be updated to **?Print?**. The movement transaction will now be displayed in the standard enquiry screens for the pallet being moved.

Select the **Print** option and the Print option dialogue box will be called.

Field Name	Description	Options
Pallet/Stock	Defaulted in by the system dependent on the type of movement	
Audit No From :	Defaulted in by the system	
Audit No To :	Defaulted in by the system	
Pallet Labels:	Whether pallet labels are required for the movement	Yes/No
Print Format:	Default label format	Will be decided during implementation
Print Driver Summary:	Whether a Movement document is required	Yes/No
Print Format:	Default label format	Will be decided during implementation
Priority	Priority the task is to be sent to the WCS (RF application)	2 through to 9
Buttons	Description	Options
OK	To confirm the settings and to print the required documentation	
Cancel	To cancel the print option	

#### Example of a standard Stock Movement Print

Report : WHR0700 v4.4 New Test Company Page : 1 of 1  
 Stock Movement Driver List Date : 17-AUG-09 16:15

Warehouse : XX1 Standard Warehouse  
 Audit No : 485

Rcd: 17-AUG-09 S/D: 12-MAY-10

Qty: 5/ 0 Owner Rot:45-FRGT-4

Owner Plt: **59**

GRN No: **83**

## 1.2.7 Stock Movement Re-Print

If required, it is possible to reprint the driver ticket. However, this can only be done prior to the pallet move confirmation. Enter the audit number range, and click the **Reprint** button.

## 1.2.8 Stock Movement Confirmation

Once the pallet movement has been completed physically, it is necessary to confirm the movement on the system. The relevant audit number should be found, and the lines confirmed: this may be done individually using **Line Confirm** or all at the same time using **Confirm**.

For the confirmation process to run, the following fields must have been populated: -

- *Driver*
- *Checker*
- *Date/Time*
- *Check Digits (If required)*

## 1.2.9 Stock Move Request - Held Stock

If the pallet or any part of the pallet is on hold then the system will notify the user.

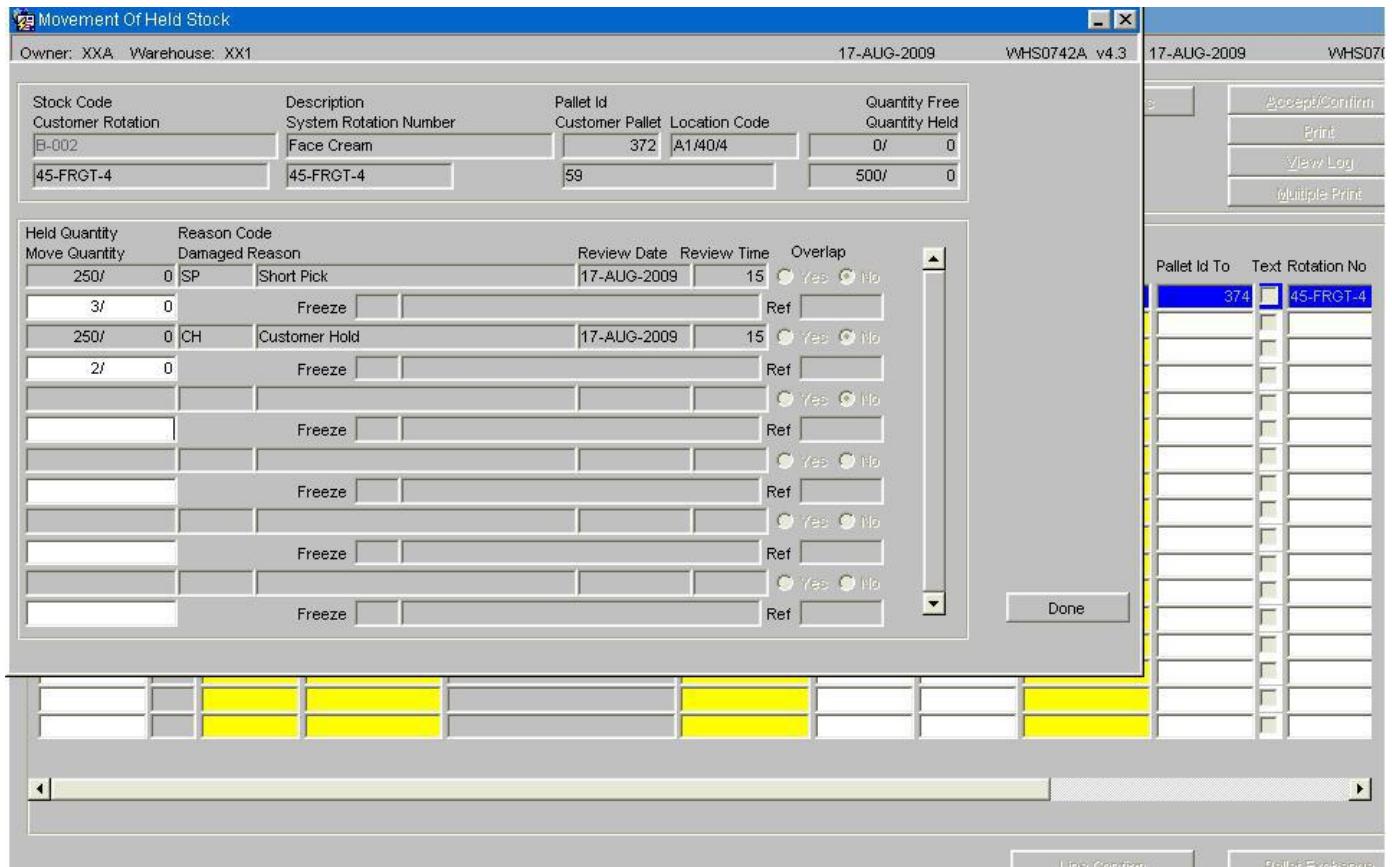

The screenshot shows the WHS0700 Stock Movement Screen. At the top, there are fields for Owner: XXA, Warehouse: XX1, Date: 17-AUG-2009, and Screen: WHS0700. Below these are buttons for Pallet (radio button selected) and Stock, Audit No: 485, Status: Requested, Driver: [empty], Checker: [empty], and Date/Time: [empty]. To the right are buttons for Serial Numbers, Accept/Confirm, Print, View Log, and Multiple Print. The main area is a grid table with columns: Owner Code, Pallet ID, Stock Code, Description, From Location, Cases, Units, To Location, Pallet Id To, Text Rotation No. A single row is visible with data: XXA, 001, 372, [empty], [empty], 0, 0, [empty], [empty], [empty]. A modal dialog box titled 'Forms' with a yellow exclamation mark icon displays the message 'FWL-02425: This stock is at held status.' with an 'OK' button. At the bottom right of the screen are buttons for Line Condition and Pallet Exchange.

### 1.2.10 Movement of Held Stock Screen

For a pallet with multiple hold codes or a mixture of free stock and held, then upon completion of the individual line a sub screen (WHS0742A) will be called that will allow the user to specify the quantity of stock to be moved against a particular hold reason code.

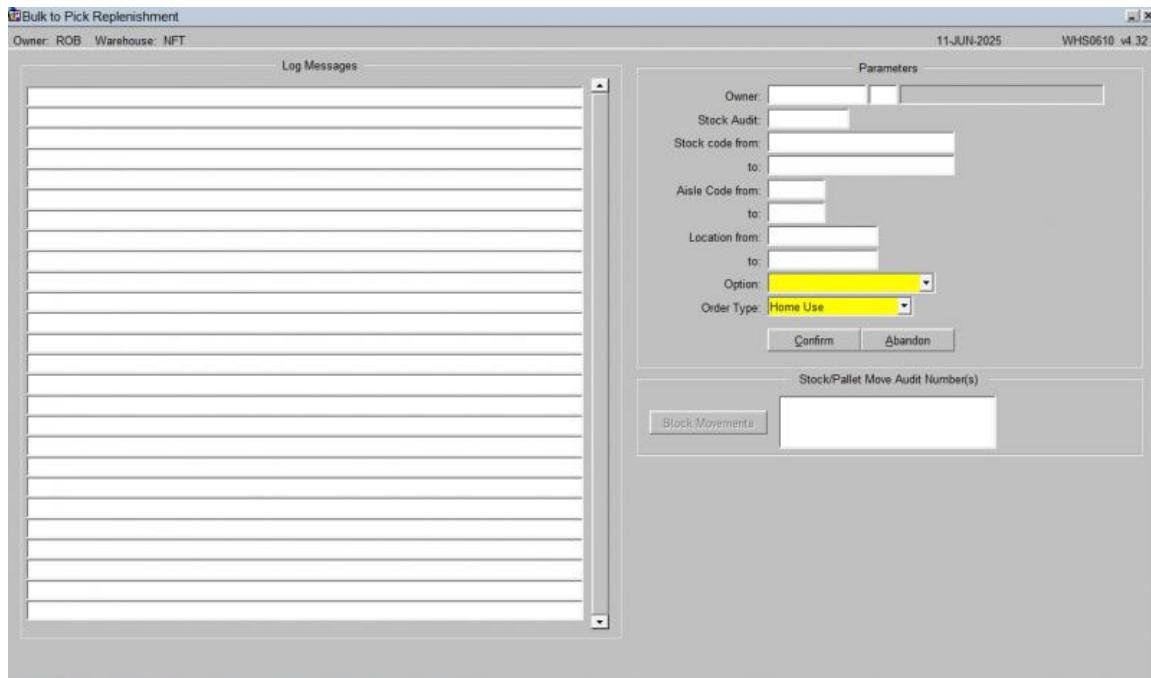

Upon completion of entering the move quantity details then select the **Done** button and complete the movement as for a standard stock movement.

### 1.3 BULK TO PICK REPLENISHMENT

The manual bulk to pick replenishment screen is used to fill up pick faces to their maximum. Usually this is prior to a picking run.

To use this, enter the parameters on the screen to identify the pick faces to be replenished. You can select using the following:

- Owner - to just replenish stock codes for a specific owner.
- Stock Code (range)- to just replenish stock codes for a range of stock codes or a specific stock code.
- Aisle Code (range) - to just replenish stock codes for specific aisles.
- Location (range) - to just replenish stock codes for specific locations.
- Order type (required) - a drop-down list is provided of all order types. Only one may be selected.

You are also required to select an option for the replenishments being generated: A drop-down-list is provided of the options

- Replenish Case Pick
- Replenish Layer Pick
- Replenish Case Replenishment
- Replenish Layer Replenishment

Once the parameters have been selected, you can press the **Confirm** button to find and generate all of the required replenishments, or click **Abandon** if this is not what you wanted to do.

When you click the **Confirm** button, the system will check the pick face level of the required stock codes and, if applicable, a replenishment movement will be generated.

The Log Messages section will show the actions that were taken and the stock codes and locations assessed.

The Stock/Pallet move audit numbers section will show all generated will display all the information for the generated replenishment movements. You can click the Stock Movements button to be taken to this audit number in the Stock Movements screen, so you can start to action it. This will take you to the [Stock Movement Screen WHS0700](#).
